Low weight for height is called thinness, if normal, or wasting, if pathological, and can reflect a recent or chronic condition. Prevalence in non-disaster areas is around 5%. A lack of evidence of wasting in a population does not imply the absence of current nutritional problems.	(SD 2-) (SD 3-)	Weight for Height	3030149	30

World Health Organization	<p>This parameter reflects the achieved linear growth and its deficit indicates long-term cumulative inadequacies of health or nutrition. Two related terms are used when describing this parameter: length and stature. Length is the measurement while in a recumbent position and is used for children under 2 years of age, while stature refers to standing height. For simplification, the term height is used for both measurements in this report. Low height for age (below -2SD of the NCHS/WHO reference) ranges from 5 to 65% among less developed countries. In low prevalence countries, it is most likely due to normal variation, i.e. shortness; in less developed countries it is likely to be due to a pathological process, resulting in stunting.</p>	(SD2-)	Height for Age	( )	3030150	30

Since its establishment on 1993, the Palestinian Central Bureau of Statistics (PCBS) used to document all its activities and outputs in an organized manner. For example, the PCBS prepared manuals and guidelines for the project cycle, dissemination, treated data for public use, annual planning, statistical indicators manual, and many other manuals. The work on this glossary started since 1999, where at that time a first draft of the glossary was prepared to be used internally in PCBS. In 2005, the PCBS decided to prepare a new version of the Glossary to be distributed widely at all statistical units in the ministries and governmental institutions to insure a unified use of the statistical glossaries by all producers of statistics.

The Glossary is bilingual (Arabic/ English), and is available in both hard and soft copies, the soft copy enables users to use the Glossary dynamically, since we are providing it on the PCBS' web site (<http://www.pcbs.gov.ps>).

By using this glossary, we ensure using the same terms and concepts in the PCBS' publications regardless of the department produced the publication. Furthermore, by distributing the glossary at the statistical units in the governmental institutions and using it properly from these units we guarantee unified definitions and Terms at the national level.

Finally, this Glossary is a further step towards institutionalizing the Palestinian National Statistical System on the way of implementing professional ethics of the official statistical work in Palestine.

## Chapter One

### **Introduction**

As a result of the increasing role of statistics in all areas and in view of the great importance occupied by statistical research, it was felt that the Palestinian Central Bureau of Statistics (PCBS), has to work on a manual includes all the statistical terms and concepts used in the various statistical activities. So that access to these terms and concepts of all workers in the field of statistical field, researchers and others interested in, must be easily.

The production of reliable statistics locally and globally requires a wide range of basic information about the produced statistics, as well as adequate data on the subjects described by these statistics, the standardized glossary is an essential component of this information which named “metadata”, so the standardization of these concepts as the case with the methodologies and classifications used in implementation of surveys and studies is a prerequisite for the standardization of the statistical production and raise the level of it’s reliability.

The importance of this Glossary that the comparisons on indicators of scientific phenomena are necessary for policy formulation by decision makers at all levels in our life, whether these comparisons over time as in time series, or comparisons between the different regions locally and nations globally. It is difficult to make these scientific comparisons if there is no standardization of the concepts used during the conduction of surveys and statistical studies.

The “Glossary of Statistical Terms Used in PCBS” provides this possibility for comparisons in-house first, by standardizing locally all statistical terms through formal adoption and distribution to all statistical units in ministries and agencies concerned with producing statistical figure in Palestine. Secondly, at the external level, where all the terms and terms contained therein has been to ensure consistency and compatibility with international sources approved by the competent bodies, so the glossary will contribute effectively to allow for comparative studies and gives the statistical Palestinian figure more credibility worldwide.
