## **Acknowledgement**

**The Cooperation and understanding of children and households selected in the survey sample during field work was truly remarkable.**

**The Palestinian Central Bureau of Statistics (PCBS) extend it's gratitude to International Labour Organization (ILO) for their financial and technical support during preparations and implementing of the survey.**

**Financial support for the Child Labour survey, 2004 at PCBS is being provided by the Palestinian National Authority (PNA) and the Core Funding Group (CFG) represented by the Representative Office of Norway to PNA ;the Representative Office of Netherlands to PNA; Swiss Agency for Development and Cooperation (SDC); UK Department for International Development (DFID); the European Commission (EU); and the World Bank (WB).**

## **Note for Users**

1. As a result of rounding a discrepancy of observation totals is noticed; plus or minus one.
2. (-) In tables means observations are too small.
3. For all tables the reference period is the last week (the week before the interview) otherwise it is mentioned.
4. Data in the tables 9-23 excluded children (5-9) years who did not work at least 2 months during the last 12 months.
5. Small discrepancy of some indicator results compared to those released in the press conference, that discrepancy was due to completing comprehensive data cleaning.

## **Preface**

Child issues and child rights are significant and a matter of concern worldwide, the child of today is the youth of tomorrow, the interest aimed to improving the child social and economic life, the child right conventions in the year of 1989 from the General Committee of United Nation was approved. Proceeded by the September, 30<sup>th</sup> 1990 Summit Conference for the international pronounce of Child Right especially in labour , which imposed minimum age for child working, because child work consider one of profanation international conventions, abuse for child dignity and humanity and exploitation of his poverty, need and his worst conditions. Child Labour consider international problem it's risk become from enormous numbers of children annually engaged in labour market and the type of work they practice. The majority of them are engaged in hazardous work, and the problem extended with the spread of poverty, which lead children to engage in labour market to secure their households from suffering hunger.

The Palestinian Central Bureau of Statistics is pleased to present the findings of the Palestinian Child Labour Survey. This Survey includes an integrated indicators of Child Labour.

The main objective of collecting data on the Palestinian Child Labour, is to provide basic information on the relative size and structure of the Palestinian working children. These data are supported with information on other aspects of the economy that will provide a basis for evaluation and analysis of macro-economic policies.

This report provides main findings of child labour survey which was conducted during the period January, 10<sup>th</sup> 2004 until March, 4<sup>th</sup> 2004, including the main indicators of child work conditions, size of child labour, reasons for child work, also the report revealed the economic, social, educational level for households having a working children, as well as the demographic characteristics of the children (5-17) years, measure the household and the child perspective toward child work and other indicators. In addition the report presents indicators about different characteristics; industry, occupation, sex.

We hope that these indicators will provide Palestinian planners, researches and decision makers with needed statistical data on the different aspects of Palestinian Child Life.

## Executive Summary

The Palestinian Central Bureau of Statistics has conducted a national survey of child labour in the Palestinian Territory between January 10<sup>th</sup>, 2004 and March 4<sup>th</sup>, 2004. The survey covered a sample of 10,334 households within the Palestinian Territory of which 8,601 households were interviewed with at least one child aged (5-17) years.

The significance of this survey is due to its being the first national survey dealing with Palestinian child labour, in addition to the fact that it was carried out during a critical and sensitive political and social time period for the Palestinian population.

- The estimated population of children (5-17) years old in the Palestinian Territory Mid-February 2004 was 1,313, 663 representing 34.9% of the total population.
- 3.1% of the total children aged (5-17) years are working children (3.8% in the West Bank, 1.9% in Gaza strip)
- 4.6% of working children are in rural areas compared with 2.6% in urban areas and 1.8% in refugee camps.
- The highest percentage of working children in the West Bank was registered in the Jericho governorate (13.2%) followed by the Salfit district (10.4%), then Qalqilya governorate (9.2%). The Jerusalem and Bethlehem governorates registered the lowest percentages at 1.3% and 1.8% respectively.
- In the Gaza Strip, the Gaza governorate registered the highest percentage (2.8%) followed by Rafah (2.2%), while the lowest percentage was registered in Deir al-Balah and Khanyunis governorates (1.0%) for each.
- 56.2% of working children are classified as child labourers; representing 1.7% of total children (5-17) years.
- 67.4% of working children work as unpaid family members (71.8% in the West Bank, and 53.3% in the Gaza Strip)
- 51.1% of working children in the West Bank worked as skilled workers in agriculture, while workers in services, shops and markets represents 16.6%. In the Gaza Strip workers in crafts and related occupations represent 27.6% and workers in services, shops and markets represent 27.0% .
- 55.6% of working and attending school children work less than 15 hours per week, while more than two thirds of working children not attending school work more than 34 hours per week (71.2%) . The average weekly work hours reached 25.6 hours.
- 87.0% of working children work during the day time (before sunset) and 1.3% work during night time, while 11.7% work during both periods.
- 7.6% of working children are exposed to injuries or chronic diseases at work.

- 71.0% of working children work due to economic need. 51.4% work to assist in household projects and 19.6% work to increase household income.
- 5.7% of not working children and not attending school worked more than 3 hours daily in house chores, while 55.4% do not help in house chores.
- 89.5% of working children watch TV during their free time. Two thirds of working children (73.0%) play with friends during their free time, while 20.9% use computers and 6.2% use the internet.
- 2.3% of children of wage employees joined the labour market compared to 5.0% of children of self employed fathers. Heads of households who work as skilled workers in agriculture registered the highest percentage of working children among children aged (5-17) years, 12.7%.
- The results showed that 2.5% of working children belong to households of less than 7 persons, while 3.1% belong to households of 7-8 persons.
- 46.1% of working children's parents wish their children would concentrate on their education, while 18.1% prefer that their children continue to work only and 8.5% prefer that their children study and work at the same time.
- 95.4% of children aged 6-17 years are attending school .

## Chapter One

### **Introduction**

The Palestinian Central Bureau of Statistics (PCBS) conducted a survey of child labour (5-17) years of age between January 10<sup>th</sup> , 2004 and March 4<sup>th</sup> , 2004. The survey is the only one of its kind at the national level and is part of a larger plan to compile a reliable and comprehensive database of statistics concerning various aspects of Palestinian economic life.

Over the past decade child labour has become a subject of great interest in the world at large, as more children join the labour market in lieu of continuing their education. This is particularly worrisome in developing countries where there are dramatic increases annually in the number of children working and where working children are often engaged in hazardous labour.

The Arab Labour Organization is concerned about working to draw up conventions to: organize child labour; protect child rights at the work place; set age, pay and work hour requirements; and provide medical care for working children.

#### **1.1 Survey Objectives:**

The main objective of collecting data on child labour is to provide basic information on the size of the Palestinian child labour force, as well as to establish a statistical database to determine the magnitude of child labour, the work conditions they endure and the extent of societal abuse they are exposed to. In general, this data, along with supporting information regarding other aspects of the Palestinian economy, will provide a basis for the evaluation of macro-economic policies in Palestine.

The objectives of our survey are:

1. To provide a statistical database of child labour in the Palestinian Territory.
2. To provide an estimate of the extent of child labour.
3. To help determine the reasons behind the prevalence of child labour and its impact on child development.
4. To provide information on child work conditions.
5. To determine the impact child labour has on basic child rights.
6. To gauge family and child perspectives on child labour.

#### **1.2 Report Structure:**

This report consists of five chapters. Chapter One presents a background on child labour and survey objectives. Chapter Two outlines the survey methodology as well as definitions for key research terms. Chapter Three outlines the survey results. Chapter Four discusses the questionnaire design, sampling frame, sample design and sample weights calculations, as well as the recruitment and training of interviewers and supervisors, fieldwork operations, data processing, coding and editing after data entry and tabulation. Chapter Five discusses quality of the data as well as possible sources for error.

## Concepts and Definitions

- Child:** Completed years age at the time of the interview is 17 years. For the survey purpose we targeted on children aged (5-17) years
- Household:** One person or a group of persons living together who make common provision for food or other essentials for living. Household members may be related, unrelated, or combination of both.
- Head of Household:** The person who usually lives with the household and is recognized as head of household by its other members. Often he/she is the main decision-maker or responsible for financial support and welfare of the household at the time the survey is conducted.
- School Attendance:** Attendance means registering the person in any formal education stage irrespective of whether it took the form of continuous attendance or distant learning. Formal education stages include the elementary stage, preparatory stage, (both of which are referred to as the basic stage), secondary stage, and higher education stage (universities, colleges, vocational institutes, ...etc.). Enrollment categories are as follows:  
**Attending:** It applies if the person is currently enrolled in a regular education stage.  
**Attended and left:** It applies if the person unsuccessfully left a regular education stage, i.e. without obtaining any degree.  
**Attended and graduated:** It applies if the person successfully graduated from a regular education stage and did not enroll in any stage after that.  
**Never attended:** It applies if the person is not currently enrolled and was never enrolled in any regular education stage.
- Work:** Includes any activity for wage or salary, for profit or family gain, in cash or in kind. One hour or more of such activity constitutes work,. Work also includes unpaid activity on a family farm or business.
- Working Child:** Child aged 5-17 years who was worked at least one hour either for pay (cash or in-kind), or unpaid family workers during the reference period, or at least two months uring last 12 months. Working children are classified according to status in employment as follows:  
**1. Employer:** A child who operates his or her own economic enterprise or engages independently in a profession or trade, and hires one or more waged employees.  
**2. Self-Employed:** A child who operates his or her own economic enterprise or engages independently in a profession or trade, and hires no employees.  
**3. Wage Employee:** A child who works for a public or private employer and receives remuneration in wage, salary, commission, tips, piece-rates or pay in kind.  
**4. Unpaid Family Member:** A child who works without pay in an economic enterprise operated by a related person living in the same household.

<b>Child Labour:</b>	<p>Working children (5-17) years and on them the following condition is applicable:</p> <ol style="list-style-type: none"> <li>1. Children (5-11) years who worked one hour either for pay (cash or in-kind), or unpaid family and domestic workers during the reference period,.</li> <li>2. Children (12-14) years who worked more than 14 hours a week , or the child worked under unsafe conditions (including if that involves domestic labour); child works in one of the ‘worst forms’ of child labour identified by C. 182; the child works under conditions as specified domestically in reference to Article 4 of C. 182.</li> <li>3. Children (15-17) years who worked more than 40 hours a week, the child worked under unsafe conditions (including if that involves domestic Labour); child works in one of the ‘worst forms’ of child labour identified by C. 182; the child works under conditions as specified domestically in reference to Article 4 of C. 182.</li> </ol>
<b>Main Job:</b>	The job at which the person usually works the most hours in his/her main job. If a person usually works the same number of hours at two jobs, the “main” job is the job at which the person has been employed the longest.
<b>Occupation:</b>	Occupation refers to the kind of work done during the reference period by the person employed, or the kind of work done previously if unemployed, irrespective of the industry or the employment status of the person. Occupations are grouped together mainly on the basis of the similarity of skills required to fulfill the tasks and duties of the job. Occupations are classified according to the International Standard Classification of Occupation (ISCO 1988).
<b>Economic Activity:</b>	Refers to the activity of the establishment in which an employed person worked during the reference period, or last worked if unemployed. This activity is defined in terms of the kind of goods produced or services supplied by the unit in which the person works. Industry activities are classified according to the unified commodity classification in the West Bank and Gaza Strip which is based on the International Standard Classification of All Economic Activities (ISIC Rev3).
<b>Hours Worked:</b>	Total number of hours actually worked during the reference period as well as overtime and time spent at the place of work on activities such as preparation of the workplace. Leaves, meal breaks and time spent on travel from home to work and vice versa are excluded from work hours.
<b>Wage:</b>	Cash net wage paid to the wage employee from the employer. Wages received in different currencies are converted into New Israeli Shiekles according to the exchange rate in the survey period
<b>Work Injury:</b>	Any kind of physical harm that has occurred to a person during his work time. All kinds of harm are considered here. How much slight they seem, such as burns, broken, cuts, ...etc.
<b>Expenditure:</b>	Includes the following: <ol style="list-style-type: none"> <li>1. Cash spent on purchase goods and services for living purposes.</li> <li>2. The value of goods and services payments or part of payments received</li> </ol>

form the employer.

3. Cash expenditure spent as taxes (non commercial or non industrial), contributions, insurance, gifts, interest on debts and the non consumption items.

GS: Gaza Strip

PSUs: Primary Sampling Units

## Chapter Three

### Main Findings

The estimated population of children aged 5-17 years in the Palestinian Territory (Mid-February 2004) was 1,313,663, representing 34.9% of the total population, (33.9% in the West Bank and 36.8% in Gaza Strip), of which 54.9% were in urban areas, 29.4% in rural and 15.7% in refugee camps (Table 1).

#### 3.1 Characteristics of Working Children and Child Labour<sup>1</sup>

The results showed that there were 40,139 working children in the Palestinian Territory (wage employee or unpaid family member) during the survey period, representing 3.1% of all children aged 5-17 years (3.8% in the West Bank, 1.9% in the Gaza Strip) (Table 2).

The highest percentage of working children was in rural areas, 4.6% compared to 2.6% in urban and 1.8% in refugee camps (Table3).

The highest percentage of working children was registered in Jericho governorate (13.2%), followed by Salfit district (10.4%), then Qalqilya governorate (9.2%). Jerusalem and Bethlehem governorates registered the lowest percentages (1.3% and 1.8% respectively). In the Gaza Strip, Gaza governorate registered the highest percentage (2.8%), followed by Rafah (2.2%), while the lowest percentage was registered in Deir al-Balah and Khanyunis governorates (1.0% each) (Figure 1, table 4).

Male children were more likely to work than female children (5.3% and 0.7% respectively), and older children were more likely to work than younger children, (0.8%, 3.5% and 7.2% for the age groups (5-9), (10-14) and (15-17) respectively (Table 2).

Data showed a discrepancy between the answers of parents and children regarding the child's work status. Parents' answers indicated that 3.1% of children aged 5-17 years are working whereas children's answers (63,468 children) indicated that the percentage was 4.8% (6.0% in the West Bank compared to 2.9% in the Gaza Strip) (Tables 2,43).

#### Child Labour

The results showed that 56.2% of working children fall into the category of child labour; 22,570 children (according to key concepts and definitions) representing 1.7% of total children aged (5-17) years. Data indicate that the majority of child labour is among children under the age of 15 years (18,024 children), of which 9,155 are under the age of 12 years, 8,869 are among 12-14 year olds, and 4,546 children who are working are aged (15-17) years (Table 6).

The results showed that 24.3% of child labourers are not attending school (26.2% for males, 7.9% for females) (Table 24). 44.2% of child labourers are working in the agricultural sector, 32.0% are working in trade, restaurants and hotels (Table 22), and 42.3% are working as skilled workers in agriculture and fishing (48.6% in the West Bank and 18.9% in the Gaza Strip). Results showed that 24.1% of child labourers are working in service, shops and markets, and 19.5% in elementary occupations (Table 23).

---

<sup>1</sup> The main findings are based on parents' answers. According to International Labour Organization experience and recommendations, parents' answers are more reliable than child answers.

### **Working Children by Status in Employment**

About two thirds (67.4%) of working children work as unpaid family members (71.8% in the West Bank and 53.3% in the Gaza Strip), distributed as 87.8% of working females and 64.6% of males. At the same time, 28.1% work as wage employees for others (8.7% of working females and 30.7% of males). 98.0% of working children aged 5-9 years work as unpaid family members. Also 37.6% of children not attending school work as unpaid family members compared with 82.1% for those attending school (Tables 9-11).

### **Working Children by Economic Activity**

The results showed that 46.1% of working children work in agriculture, fishing and forestry (73.1% for females, 42.5% for males) compared to 29.1% in commerce, restaurants and hotels (30.8% for working males, 16.2% for working females). The percentage of working children in construction sector reached 6.6% (6.2% in the West Bank and 8.0% in the Gaza Strip). Data shows that more than half of working children who are attending school are working in agriculture sector (55.5%), while commerce, restaurants and hotels registered the highest percentage for working children not attending school at 28.2%, followed by agriculture at 27.2% (Tables 12-14).

### **Working Children by Occupation**

The results showed that 51.1% of working children in the West Bank work as skilled workers in agriculture, and 16.6% in services, shops and markets. In the Gaza Strip, 27.6% of working children work in crafts and related occupations, followed by workers in services, shops and markets (27.0%), and skilled agricultural workers (21.7%) (Table15).

### **Working Children by Place of Work**

The results showed that 45.6% of working children work on agricultural land, raising animals and fishing (72.2% of working females, 42.1% of working males); more than half of working children who are attending school are working on agricultural land, raising animals and fishing (55.1%), compared to 26.2% among those working and not attending school. The majority of working children not attending school are concentrated outside factories and construction workshops (35.2%) compared to 11.2% of those attending school.

The results indicate that working children in the West Bank are concentrated on agricultural land, raising animals and fishing (51.9%), while in the Gaza Strip they are distributed in three main places: commercial shops and offices (28.5%), workshops and factories (27.6%) and agricultural land, raising animals and fishing (25.3%).

Working children aged (5-9) years are mainly concentrated on agricultural land (65.6%): more than half of working children in the Gaza Strip (52.6%) and in the West Bank (67.4%) for the same age group (Tables 18-20).

## **3.2 Work Conditions for Working Children**

### **Work Hours**

Data showed that half of working children who attend school work less than 15 hours per week (55.6%) and 29.7% work 15-34 hours per week, while more than two thirds of children not attending school work more than 34 hours per week (71.2%). The average work hours per week reached 25.6 hours (14.4 hours for the 5-9 age group, 33.8 weekly hours for the 15-17

age group). In the Gaza Strip children work more hours on average (28.2 hours per week compared to 24.8 hours per week in the West Bank). The results showed that females work less hours weekly than males, 16.6 hours for females compared to 26.8 hours for males, (Tables 25-26).

The majority of working children (87.0%) work during the day time (before sunset) compared to 1.3% who work during the night, while 11.7% work during both periods. The survey indicated that 4.5% of children aged (5-9) years work during the day and night time in the West Bank compared to 7.8% in the Gaza Strip, while 10.5% of children aged (10-14) years in the West Bank work during the day and night, compared to 6.9% in the Gaza Strip (Table 27).

### **Work Injuries**

Data showed that 7.6% of working children were prone to injury or chronic disease during their work (7.5% in the West Bank and 8.3% in the Gaza Strip) (Table 28).

### **Work Benefits**

The results showed that 9.3% of wage employee children receive paid holidays (7.6% in the West Bank, 12.4% in the Gaza Strip), 15.0% receive paid sick leaves, 10.3% have health insurance and 16.3% of wage employee children receive frequent bonuses (12.2% in the West Bank, 23.6% in the Gaza Strip). It was also evident that 54.2% have a break time (57.2% in the West Bank, 49.0% in the Gaza Strip) (Table 30).

### **Free Time for Working Children**

The results showed that the majority of working children (89.5%) watch TV during their free time (90.0% of males, 86.9% of females). The results also showed that two thirds of working children (73.0%) play with friends during their free time, compared to 20.9% who use computers and 6.2% who use the internet. 81.7% of working female children indicated that they spend their free time helping with household chores compared to 36.5% of male children who do the same (Tables 31-32).

### **House Chores**

The results showed that the 5.1% of non working children help in household chores (4.7% of males and 5.5% of females). 6.0% are engaged in other activities and never help in household chores (7.0% of males, 5.1 of females) (Table 35).

The results indicated that 5.7% of children not working and not attending school work more than 3 hours a day in house chores, and 38.9% work less than 3 hours a day, while the rest do not help in house chores at all (55.4%). Half of female children who are not working and not attending school work in house chores (50.3%) compared to 39.2% for males (Table 36).

### **3.3 Reasons for Child to Join Labour Market**

The results showed that 71.0% of children work due to economic need, 51.4% work to assist in a household project, 19.6% work to increase household income (75.2% in the West Bank, 56.6% in the Gaza Strip).

The survey also examined the impact that stopping a child from working would have on the household economic situation. 24.0% of households stated that living standards would decline, while 52.9% stated that the economic situation would not be affected (Table 34).

### **3.4 Impact of Household Status on Child Work**

The data indicated there is an inverse relationship between the rate of children working and the educational level of the head of household: 4.1% of working children belonged to households where the head of household completed (0-6) years of schooling (1.9% not attending school and 2.1% attending school). This percentage decreased to 2.1% for heads of households who completed 13 years of schooling or more (0.3% not attending and 1.8% attending school) (Table 37).

The results showed that 2.3% of children of wage employee heads of households worked, compared to 5.0% of children of heads of households who were self employed . While the head of household who worked as a skilled worker in agriculture registered the highest percentage of working children among children aged (5-17) years (12.7%), results also showed that children working and not attending school belong to households whose head averages a daily wage of NIS 71.7 compared to NIS 99.7 for a head of household whose children do not work and attend school (Table 37).

The results showed that the percentage of working children increased as the household size increased, 2.5% of working children belong to households of less than 7 persons, compared to 3.1% who belong to households of 7-8 persons (Table 40).

The results showed that the highest percentage of working children (6.5%) belongs to households with agricultural projects, compared to 4.3% for households with no agricultural projects (Figure 5,table 39). The highest percentage of working children (3.4%) also belongs to the group of households whose monthly expenditure ranges between NIS 1500-2500 (Table 42).

### **3.5 Expectation for the Child's Future**

The results showed that 46.1% of working children's parents prefer that they concentrate on their education, while 18.1% prefer that their children continue to work only and 8.5% prefer that their children study and work at the same time. On the other hand, 71.4% of non working children's parents prefer that their children continue with their education only (Table 48).

56.8% of children reported that they wish to continue studying while 17.6% reported that they wish to work only. 16.3% of working children wish to study and work at the same time, and 7.7% wish to study and work during the summer holiday. On the other hand, 91.2% of non working children reported that they wish to study only, whereas about 2.9% wish to work only.

37.7% of working children indicated that they wish to study only, 33.1% wish to work only and 20.1% wish to work and study at the same time (Table 49).

### **3.6 School Attendance**

The compulsory schooling age is 6-15. The results showed that 95.4% of children aged 6-17 years are attending school (Table 50).

Also the results showed 2.3% of those attending school are working in economic activities (4.0% of males, 0.6% of females) (Table 7).

Results showed that 8.1% of those children not attending school are working: 9.5% in the West Bank and 6.1% in the Gaza Strip (children aged 5 years are included) (Table 8).

As for school drop-out rates (according to parents), 30.1% was due to not being interested in studying while 18.5% was due to disability/illness, and 1.2% was blamed on the security situation. Data showed a discrepancy between child and parent answers regarding the reason behind drop out (Tables 45, 51).

## Methodology

Survey methodology conformed to international standards, taking into account the Palestinian political and social reality, data processing requirements and the compatibility of outputs with other related surveys conducted in the Palestinian Territory.

### 4.1 Questionnaire Design

The questionnaire represents the main instrument for data collection. The child labour questionnaire was designed according to international recommendations and covered IPEC requirements through an International Labour Organization technical assistance mission to the Palestinian Territory.

The questionnaire consists of the following sections:

**First section:** Identification data and quality control criteria.

**Second section:** Data on household members that includes data on demographic and social characteristics, such as age, sex, refugee status, education, marital status, and family relationships.

**Third section:** Labour force characteristics for all household members aged five years and over.

**Fourth section:** Data on all household children (5-17) years, asked of child's parents. The following conditions must be applicable to answer this section: the children are not attending school and did not work one hour or more during the reference week.

**Fifth section:** Data on all children (5-17) years, answered by child's parents.

**Sixth section:** Data on all household children (5-17) years, in order to compare answers of parents and children.

**Seventh section:** Data on all households about housing characteristics, agricultural holdings, income and expenditure for the household.

### 4.2 Sample and Sampling Frame

#### Target Population

The target population consists of all Palestinian households that usually reside in the Palestinian Territory and have at least one child aged (5-17) years.

#### Frame

The sampling frame consists of a master sample of enumeration areas (EAs) selected from the Population, Housing and Establishment Census (1997). The master sample consists of area units of relatively equal size (number of households); these units have been used as primary sampling units (PSUs).

#### Sample Size

The sample size is about 10,334 households, which is sufficient to provide reliable estimates for the main indicators at the district level; 8,601 households have an eligible child to be interviewed.

### Sample Design

The sample is a two-stage stratified cluster random sample. The first stage was the selection of stratified sample of 513 enumeration areas. The number of enumeration areas in the West Bank and Gaza Strip is about 468 areas, and in Jerusalem (J1) about 45 enumeration areas.

The second stage was the selection of 20 households using data available from Census 1997 each with at least one person aged 5-17 years. while in Jerusalem (J1) data was collected from 22 households and has at least one child aged (5-17) years (beginning of enumeration area).

### Stratification:

In this stage data was collected from interviewed household, including all persons aged (5-17) years in the household.

Two levels of stratification were made:

1. Stratification by District

2. Stratification by place of residence, which comprised:

(a) Urban

(b) Rural

(c) Refugee Camps

### Response Rate

#### Households and Eligible children and their Response Rate by Region and Type of Locality

Sample and Response Rate	Region			Type of Locality		
	Palestinian Territory	West Bank	Gaza Strip	Urban	Rural	Camps
Households	10,334	6,654	3,680	5,660	3,006	1,668
Households Interviewed	8,601	5,423	3,178	4,665	2,533	1,403
Response Rate of Households	83.2	81.5	86.3	82.4	84.3	84.1
Children (5-17) years Interviewed	29,586	17,223	12,363	15,751	8,693	5,142

### Weighing

Weights have been calculated for each sampling unit. Weight reflects the sampling procedures. To make the weighing procedure practical and simple, we assumed that the households have been selected directly within the EA.

Adjusted weights are important to reduce bias resulting from non-responses. "Adjusted" weights give consideration to demographic changes between the time of the Population, Housing and Establishments Census, 1997 and the time the survey was carried out.

The adjusted weights in the survey are based on the estimation of the size of the population within the Palestinian Territories and their age group distribution according to a mid February 2004.

**Estimation Procedures:**

The sample is self-weighted by design. To estimate a given total  $Y$  for a given sub-population  $A$ , we applied the following formula:

$$Y_A = \sum_h \sum_i \sum_j W_{hij} Y_{hij} \tag{1}_A$$

But since  $W$  is constant for all  $j$  within  $i$ , the estimating formula becomes:

$$\hat{Y}_A = \sum_h \sum_i W_{hi} Y_{Ahi} \tag{1}_B$$

where,

$\hat{Y}_A$  = Estimated total for variable  $Y$  in sub-population  $A$ .

$h$  = The sub-stratum within the estimation domain.

$i$  = The sample PSU (cell).

$j$  = The unit of analysis or element.

$A$  = Subset of elements possessing a given attribute, that is, belonging to a given sub-population  $A$ .

$Y_{hij}$  = Observed value of the variable “ $y$ ” for the  $j$ -the element of the  $i$ -the sample PSU in stratum  $h$ .

$W_{hij}$  = Final (adjusted) sampling weight for the element.

$y_{Ahi}$  is the unweighted PSU total within  $h$  for sub-population  $A$ .

The estimator for a given ratio for sub-population  $A$  is the following:

$$\hat{R}_A = \frac{\hat{Y}_A}{\hat{X}_A} \tag{2}$$

Where:

$\hat{R}_A$  = Estimate for the ratio of two variables,  $Y/X$ , in sub-population  $A$ .

$\hat{X}_A$  = Estimated total for variable  $X$  in sub-population  $A$ , given by formula (1)<sub>B</sub>.

$\hat{Y}_A$  = Estimated total for variable  $Y$  in sub-population  $A$ , also given by formula (1)<sub>B</sub>.

Means and proportions are special types of ratios. In the case of the mean, the variable  $X$ , in the denominator of the ratio, is defined to equal 1 for each element so that denominator is the sum of the weights in the sub-population.

In the case of proportions, the variable  $X$  in the denominator is also defined to equal 1 for all elements. But, in addition, the variable  $Y$  in the numerator is binomial and is defined to equal either 0 or 1, depending on the absence or presence, respectively, of a specified attribute in the element observed.

### Variance Calculation

It is very important to calculate standard errors for the main survey estimates so that the user can have an idea of their reliability or precision.

The variance calculation uses the method of ultimate clusters. Within any domain of estimation, for a sub-population  $A$ , and for a characteristic  $Y$ , the formulas are:

(a) The variance of an estimator of a total, estimated by:

$$(3) \quad V\left(\hat{Y}_A\right) = \sum_h \left[ \frac{n_h}{n_h - 1} \sum_{i=1}^{n_h} \left( \hat{Y}_{Ahi} - \frac{\hat{Y}_{Ah}}{n_h} \right)^2 \right]$$

Where:

$$(4) \quad \hat{Y}_{Ahi} = \sum_{j \in A} W_{hij} Y_{hij}$$

and:

$$(5) \quad \hat{Y}_{Ah} = \sum_i \sum_{j \in A} W_{hij} Y_{hij}$$

The expression in (3) is an unbiased estimator of the Variance.

(b) The variance of an estimator of a ratio, estimated by:

$$(6) \quad V\left(\hat{R}_A\right) = \frac{1}{\hat{X}_A^2} \left[ V\left(\hat{Y}_A\right) + \hat{R}_A^2 V\left(\hat{X}_A\right) - 2 \hat{R}_A COV\left(\hat{X}_A, \hat{Y}_A\right) \right]$$

Where:

$$COV\left(\hat{X}_A, \hat{Y}_A\right) = \sum_h \frac{n_h}{n_h - 1} \sum_{i=1}^{n_h} \left( \hat{X}_{Ahi} - \frac{\hat{X}_{Ah}}{n_h} \right) \left( \hat{Y}_{Ahi} - \frac{\hat{Y}_{Ah}}{n_h} \right)$$

$V(\hat{Y}_A)$  and  $V(\hat{X}_A)$  are calculated according to formula (3);

$\hat{X}_A$  is calculated according to formula (1)<sub>B</sub> and  $\hat{R}_A$  according to formula (2)

### 4.3 Reference Period

This survey was conducted between January 10<sup>th</sup>, 2004 and March 4<sup>th</sup>, 2004 with the date of reference being the date of the interview. The reference period for participation in economic activity is the week before the date of interview, (Saturday-Friday), however questions were also asked about the present period as well as the past period and the past 12 months.

#### **4.4 Pilot Survey**

The pilot survey is a miniature reflection of the main survey. It was designed to include all aspects of the actual survey and included checking training, fieldwork, questionnaire, interview data processing and the sample.

A sample of 234 households was selected from Tulkarem, Ramallah, Hebron and the Gaza Strip governorates representing urban, rural and refugee camp areas. 18 households were then chosen from each enumeration area.

The fieldwork continued for six days and was followed by a meeting with interviewers in order to discuss their observations. The questionnaire and training manuals and other documents were then evaluated and amended in accordance with the recommendations.

#### **4.5 Fieldwork Operations**

##### **Instructions and Training Manual**

The training manual was a guide for fieldwork, questionnaire completion and follow up, as well as the interviewing process. A central training course was held in Ramallah for West Bank and Gaza Strip trainees through VC between December 24<sup>th</sup> and December 30<sup>th</sup>, 2003. 106 trainees participated, 75 in the West Bank and 31 in the Gaza Strip. There were 7 days of training for fieldworkers and an additional one day for supervisors, editors, and assistants.

Training was divided into two parts: **The first part** addressed general issues such as designing statistical surveys, reaching selected households, interviewing, tasks and duties and fieldwork. **The second part** emphasized the objectives of the child labour survey and provided exercises for questionnaire completion.

##### **Main Fieldwork**

A plan for the fieldwork for both regions was designed. At this stage, the fieldwork team and the tools (questionnaires, maps, sample lists) were prepared. Two teams were set up to carry out the fieldwork:

**Team one:** Included 57 interviewers, 8 supervisors, and 7 editors. They were divided between the northern, middle, and southern areas of the West Bank.

**Team two:** Included 23 interviewers, 7 supervisors and 2 editors. They were divided between the northern, middle, and southern parts of the Gaza Strip.

Field operations were conducted in the Palestinian Territories from 10/01/2004 to 04/03/2004. Fieldwork teams were distributed among all districts on the basis of sample size in each district. The number of CLS fieldworkers were 88, including the fieldwork coordinator, and 11 supervisors.

### **Data Editing in the Field**

The project's management developed a clear mechanism for editing the data and trained the team of editors accordingly. The mechanism was as follows:

- Receiving completed questionnaires on daily basis
- Checking each questionnaire to make sure that they were completed and that the data covered all eligible persons, and that answers were error-free.
- Returning the uncompleted questionnaires as well as those with errors to the field for completion.
- Re-interviewing 10% of the sample households for each enumeration area using a special questionnaire for the supervisors to ensure the accuracy of the data when compared to the interviewers' completed questionnaire.

### **Follow up and supervision**

Follow-up strategies were designed to deal with questionnaires compiled by the interviewers on a daily basis. Supervisors delegated tasks to the teams according to the map and list. They provided the fieldwork coordinator and the project's administration with daily and weekly reports explaining the completed interviews, refusal cases, inapplicable cases (e.g. vacant housing units), interviews where results could not be determined, and the cases where contact could not be established (after three contact attempts). The reports included the technicians and coordinators' supervisory field visits.

### **Coding**

At this stage, the Economic Activity variable underwent coding according to West Bank and Gaza Strip Standard Commodities Classification, based on the United Nations ISIC-3. The Economic Activity for all employed and ever employed individuals was classified at the fourth-digit-level. The occupations were coded on the basis of the International Standard Occupational Classification of 1988 at the third-digit-level (ISCO-88).

## **4.6 Data Processing**

### **Preparation of Data Entry Programme**

At this stage the data entry programme has been prepared using the ACCESS package. Data entry screens have been designed. Entry and data verification regulations have been established to guarantee consistent and accurate entry of questionnaires. These regulations address the variables on the questionnaire level.

### **Data Entry**

Data entry began on Jan, 20<sup>th</sup>, 2004, after designing the data entry programme, testing it and training staff to deal with it, and was completed on March 29<sup>th</sup>, 2004. Data entry was linked to the receipt of questionnaires from the fieldwork whereby 17 staff members were engaged in data entry and verification of questionnaires. Data entry took place during two shifts, morning and evening, to ensure prompt data entry.

## Chapter Five

### **Data Quality**

Since the data reported here are based on a sample survey and not on a complete enumeration, they are subject to sampling errors as well as non-sampling errors.

Sampling errors are random outcomes of the sample design and are, therefore, in principle measurable by the statistical concept of standard error. A description of the estimated standard errors and the effects of the sample design on sampling errors are provided in the previous chapter.

Non-sampling errors can occur at various stages of survey implementation, data collection or data processing. They are generally difficult to be evaluated statistically. They include errors resulting from non-response, sampling frame coverage, coding and classification, data processing, and survey response (both respondent and interviewer-related). The use of effective training and supervision and the careful design of questions have direct bearing on limiting the magnitude of non-sampling errors, thereby enhancing the quality of the resulting data. Some errors are unavoidable and occur due to non-response because the households were away or refused to participate, (only 1.0%). It is difficult, however, to assess the amount of bias resulting from non-response; non-response is more frequent in some population groups than in others. This is expected but such information is necessary to be able to compensate for bias resulting from non-response errors.

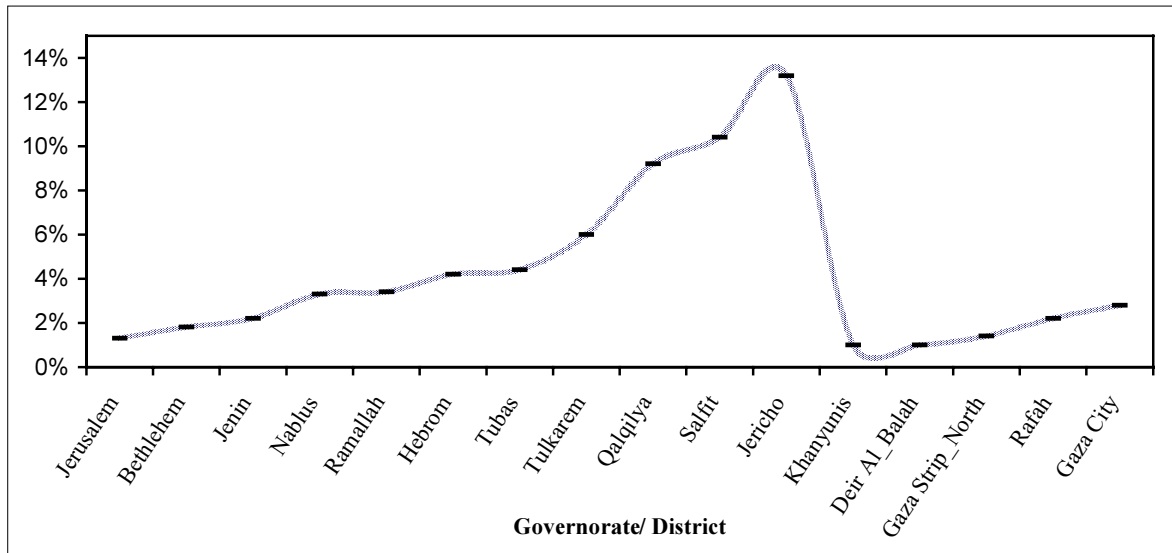

Errors can occur when households are interviewed in a week different than the reference week. However, all households were interviewed during the reference week in this survey.

Errors can occur during data processing, such as coding and punching. Data therefore was checked post processing.

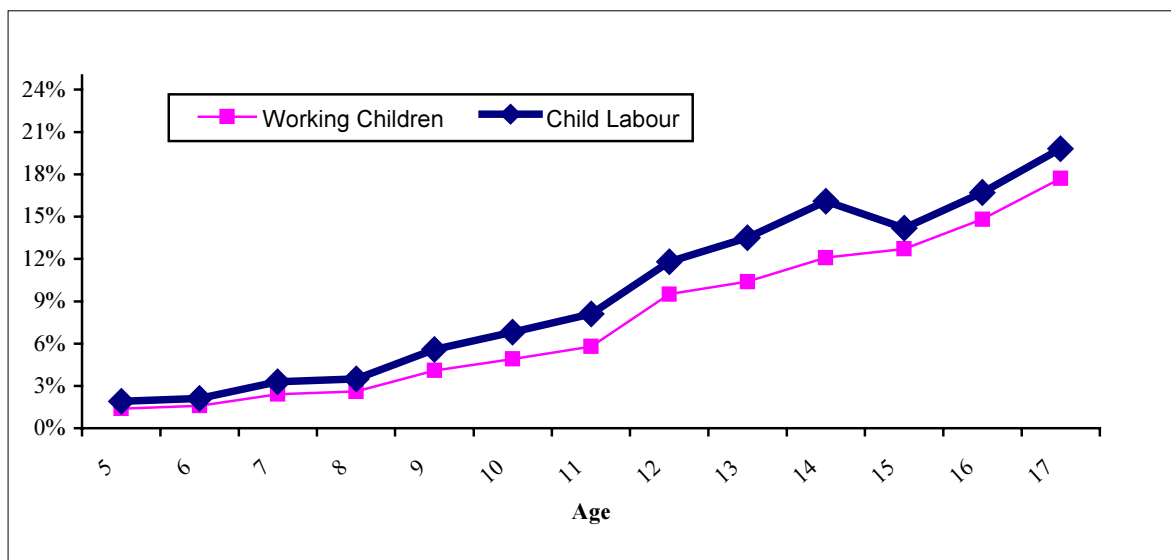

Thorough training, supervision, and various quality control checks were used to minimize bias resulting from response errors. Response errors resulted from misunderstanding of the questions, interviewers' bias in asking the questions and probing.
