Acknowledgments

The Palestinian Central Bureau of Statistics (PCBS) extends its deep appreciations to all owners and managers who responded to the prices survey and to all workers in the survey for being well dedicated in performing their duties.

The survey of Prices and Price Indices 2010 has been planned and conducted by a technical team from PCBS and with joint funding by the Palestinian National Authority (PNA) and the Core Funding Group (CFG) for the year 2010 represented by the Representative Office of Norway to PNA and the Swiss Development and Cooperation Agency (SDC).

Moreover, PCBS very much appreciates the distinctive efforts of the Core Funding Group (CFG) for their valuable contribution to funding the project.

Notes to Users

1. Due to variations in prices and weights between Jerusalem J1 and other West Bank governorates, the CPI has been calculated separately for Jerusalem J1 and the West Bank governorates without Jerusalem J1. Therefore, the term CPI for West Bank is equivalent to the term CPI for West Bank excluding Jerusalem J1.
2. (..) means there's no available data for these items in that period.
3. Prices of goods are collected in New Israeli Shekels (NIS). Monthly average exchange rate of the US \$ for the years 2000 - 2010 is as follows:

Month	2000	2001	2002	2003	2004	2005	2006	2007	2008	2009	2010
January	4.11	4.11	4.52	4.83	4.41	4.37	4.61	4.22	3.76	3.90	3.72

Preface

PCBS has devoted great efforts to develop appropriate frame for goods and services which enables the production of the Consumer Price Index, Wholesale Price Index, Producer Price Index, Construction Cost Index and Road Cost Index and other indices for the Palestinian Territory.

Price Indices are usually used as a tool for measuring changes in prices of goods and services and monitoring price trends, market conditions and standard of living. However, Price Indices are considered one of many indicators which can be used for examining the cost of living. On the other hand, Price Indices are widely used for measuring inflation rates and economic recession.

PCBS is pleased to issue this report for the year 2010. The report represents price indices for producer, consumer, wholesale, construction and road. PCBS has begun producing statistical reports on prices since the beginning of the year 1997 on a regular basis.

PCBS produces statistical data on indices numbers that are needed by data users, decision makers, planners, and researchers. In the meantime, PCBS encourages users of Price Indices to provide feedback and suggestions in order to make the necessary improvements to meet their needs.

Executive Summary

Price Indices are usually used as a tool for measuring changes in prices of goods and services and monitoring price trends, market conditions and cost of living. However, Price Indices do not reflect other factors affecting costs of living, e.g., quality and quantity of purchased goods. On the other hand, Price Indices are considered as one of many indicators which can be used for examining the costs of living, measuring inflation rates and economic recession.

The main results (2010 compared with 2009):

1- Changes of Consumer price indices during 2010 compared with 2009 as follow:

- Consumer price indices in the Palestinian Territory increased by 3.75%.
- Consumer price indices in the West Bank increased by 4.24%.
- Consumer price indices in Jerusalem J1 increased by 5.25%.
- Consumer price indices in Gaza Strip increased by 1.72%.

2- Changes of Producer price indices during 2010 compared with 2009 as follow:

- Total Producer Price Index increased by 3.36%.
- Local Consumption Products increased by 3.60%.
- Exported Local Products increased by 1.95%.

3- Changes of Wholesale price indices during 2010 compared with 2009 as follow:

- Total Wholesale Price Index increased by 3.70%.
- Local Products increased by 4.91%.
- Imported Products increased by 2.92%.

4- Changes of Construction cost indices in the West Bank during 2010 compared with 2009 as follow:

- All item of Construction Cost index increased by 1.56%.
- Residential buildings increased by 1.54%.
- Non-residential buildings increased by 1.56%.

5- Changes of Road cost indices in the West Bank during 2010 compared with 2009 as follow:

- All items of Road Cost index increased by 3.75%.
- Agricultural roads increased by 4.79%.
- Maintenance of the municipality roads increased by 3.67%.
- Development of the municipality roads increased by 3.50%.
- Maintenance of outside roads increased by 3.66%.
- Development of outside roads increased by 3.73%.

Chapter One

Introduction

PCBS has begun its activities of collecting data on the prices of consumer, producer, wholesale, construction and road products and services for establishing updated indices. This effort has been initiated in conjunction with the launching of the first Palestinian Expenditure and Consumption Survey, which allows for calculating the appropriate weights needed for calculating the (PCPI). Price collection for thousands of commodities and services from different areas of the West Bank and Gaza Strip leads to the establishment of the Palestinian Consumer Basket (PCB). This basket, once identified and proved to be stable, is studied on a regular basis.

This bulletin includes Consumer, Producer, Wholesale, Construction and Road Price Indices for the year 2010.

1.1 Project Objectives

The prices surveys provide mainly the following:

- Data on producer price indices for local and exported goods in the Palestinian Territory.
 - Data on wholesale price indices for local and imported goods in the Palestinian Territory.
 - Data on consumer price indices in the Palestinian Territory covering the West Bank, Gaza strip, and Jerusalem J1.
 - Data on prices and record of the cost of construction for residential buildings and non-residential buildings in the West Bank.
 - Data on prices and record of the cost of various kinds of roads in the West Bank.
- Measuring the inflation rates in the Palestinian Territory.

1.2 Coverage

Prices are collected from 3,340 outlets distributed in the Palestinian main cities, for producer, wholesale indices, construction and roads. ISIC-3 was used for the classification of commodities, and COICOP used for the classification of consumer commodities. The total number of commodities included in calculating consumer price indices amounted to 993 commodities collected from 1,975 outlets; for producer price indices 649 commodities collected from 268 outlets; for wholesale price indices 1,256 commodities collected from 528 outlets; and for construction and road price indices 202 commodities collected from 569 outlets. The year 1996 was used as the base year in the Palestinian Territory for wholesale and producer indices adjusted to 2007 as new base year. CPI produced separate indices for West Bank, Gaza Strip, and Jerusalem J1 and PCBS adjusted the base year to 2004 instead of 1996. December 2007 was considered as the base month for construction of indices, and December 2008 was considered as the base month for road indices.

1.3 Uses of Price Indices

Price indices are usually used as a tool for measuring changes in prices of goods and services and monitoring price trends, market conditions and cost of living. However, the price index do not reflect other factors affecting costs of living, e.g., quality and quantity of purchased goods. Thus, it is considered as one of many indicators which can be used for examining the costs of living. On the other hand, the price indices are widely used for measuring inflation

rates and economic recession.

1.4 Report Structure

The report is divided into five chapters as follows:

Chapter One: Comprises an introduction to the prices survey of price indices including the survey's program, objectives, the use of price indices and report structure.

Chapter Two: Presents the main concepts and definitions used in the report with a brief description for each of them.

Chapter Three: Presents the main findings of the prices survey.

Chapter Four: Presents the methodology of the fieldwork in terms of questionnaire, sample and fieldwork data collection activities. In addition, the chapter discusses data processing and tabulation.

Chapter Five: Addresses the quality of the data and findings through discussing the main remarks on the fieldwork as well as comments and remarks on the tables.

Statistical Tables: Presents the main findings at the level of the Palestinian Territory, West Bank, Jerusalem J1, and Gaza Strip.

Chapter Two

Concepts and Definitions

Inflation:

The overall general upward price movement of goods and services in an economy. The inflation rate is calculated in accordance with the following equation:

$$\text{Inflation rate} = \frac{P_t}{P_{t-1}} * 100 - 100$$

Where: P_t is the general price level in the comparison periods.

P_{t-1} represents the general level of prices of the previous periods.

Price index:

It is a statistical tool used for measuring changes in prices of purchased goods and services during different temporal intervals.

Laspeyres equation:

An equation used for calculating price indices, which measures comparative period prices in relation to base period prices multiplied by proportional weight of commodity or goods groups throughout the base periods.

Consumer price index:

It is a table containing the consumer price index during the current period compared with the previous period.

Purchasing power of money:

The value of money as measured by the quantity and quality of goods and services it can buy.

Consumer price:

A price paid by a household to gain a commodity or service.

The base time:

Refers to the period with which the current period is compared.

Consumer basket:

The categories of classified goods and services used by the consumer.

Producer price:

The producer's price, as defined in SNA93, is the amount receivable by the producer from the purchaser for a unit of a good or service produced as output minus any VAT, or similar deductible tax, invoiced to the purchaser. The producer's prices excludes any transport charges invoiced separately by the producer.

Wholesale price:

The resale (sale without transformation) of new and used goods to retailers, industrial, commercial, institutional or professional users, to other wholesalers, or to those acting as agents or brokers in buying merchandise for, or selling merchandise to such persons or companies. The wholesale price includes VAT and any transport charges.

Weights:

The percent which reflects the relative significance of commodities and services within the consumer basket or in the economy.

Base prices:

Refers to the prices of goods and services in a period with which current prices are compared.

Percentage change in price index:

It is the change on the index, calculated by dividing the price index of a particular period by the price index of another comparison period multiplied by one hundred then subtracting one hundred.

Chaining Coefficient:

It is a term used to adjust indices which has different base period to the same base period that they can be compared.

Chapter Three

Main findings

3.1 The Consumer Price Index during 2010

The annual consumer price index in the Palestinian Territory during 2010 (Base year 2004 = 100) increased by 3.75% compared with the previous year, while the change in prices in 2009 increased by 2.75% compared with 2008. The rise in the CPI during 2010 was due to the increase in the prices of food items by 3.40%, alcoholic beverages and tobacco by 12.13%, education by 6.00%, housing by 5.12%, transportation by 2.64%, as well as furniture and household's goods by 2.65%.

Change of consumer prices in the West Bank during 2010:

The consumer prices in the West Bank increased by 4.24% during the year 2010 (Base year 2004 = 100), compared with an increase by 0.57% during the previous year. This was due to the increase in the prices of food items by 4.74%, prices of alcoholic beverages and tobacco by 16.14%, price of education by 8.18%, price of restaurants and cafes by 3.31%, price of miscellaneous goods and services by 3.40%, Transportation by 2.34%, and the prices of housing by 5.54%. The prices of commodities of other groups also reported changes, but had less effect on the prices index.

Change of consumer prices in Jerusalem J1 during 2010:

The consumer prices in Jerusalem J1 increased by 5.25% during 2010 (Base year 2004 = 100), compared with an increase by 3.54% during the previous year. This was due to the increase in the prices of food items by 5.78%, prices of alcoholic beverages and tobacco by 18.08%, prices of clothing and footwear by 7.49%, prices of furniture, household's goods by 4.52%, prices of housing by 3.20%, Transportation by 5.56%, and the prices education by 3.39%. The prices of commodities of other groups also reported an increase, but had less effect on the prices index.

changes of consumer prices in Gaza Strip during 2010:

Consumer prices in Gaza Strip reported an increase by 1.72% during 2010 (Base year 2004 = 100), while the prices increased by 4.42% during the previous year. This was due to the increase in the prices of alcoholic beverages and tobacco by 4.05%, prices of furniture, household's goods by 4.79%, prices of restaurants and cafes by 4.79%, prices of miscellaneous goods and services by 4.75%, prices of education by 4.62%, Textiles, clothing and footwear by 1.60%, and prices of housing by 6.81%.

**Figure1: Consumer Price Indices by Region for the Period: 2004-2010
(Base year 2004=100)**

3.2 The annual Producer Price Index during 2010

The annual producer price index in the Palestinian Territory increased by 3.36% during 2010 (Base year 2007 = 100), compared with an increase by 1.53% during 2009. The prices of locally produced exported goods increased by 1.95% during 2010, and the prices of locally consumed items moved up by 3.60% during 2010. The prices of manufactured items moved up by 2.12%, the prices of agriculture products increased by 5.96%, the prices of fish increased by 1.20%, while the prices of mining and quarrying which cover only quarrying and crush stone decreased by 0.11%, during the same period.

Figure 2: Producer Price Indices in the Palestinian Territory by Source of Products, for the Period: 2004-2010 (Base year 2007=100)

3.3 The annual Wholesale Price Index during 2010

The annual wholesale price index in the Palestinian Territory increases by 3.70% during 2010 (Base year 2007 = 100), compared with a decrease by 0.65% during 2009. The main reason was the increase in the prices of imported goods by 2.92%, and the price of local production increased by 4.91%. the price of manufacturing items increased by 3.10%, and the price of fish increased by 0.17%, the prices of agriculture products reported an increase by 5.31% during 2010, while the prices of mining and quarrying decreased by 0.70%.

Figure3: Wholesale Price Indices in the Palestinian Territory by Source of Products, for the Period: 2004-2010 (Base year 2007=100)

3.4 The Construction Cost Index in the West Bank during 2010

The annual construction cost index increased by 1.56% during the year 2010 compared with 2009 (Base Month December 2007 = 100). **The construction cost index for residential buildings increased by 1.54% and non-residential buildings by 1.56%.**

**Figure4: Monthly Construction Cost Indices in the West Bank during 2010
(Base Month December 2007 = 100)**

3.5 The Road Cost Index in the West Bank during 2010

The annual road cost index increased by 3.75% during the year 2010 compared with 2009 (Base Month December 2008 = 100). This was due to the increase in the cost of agricultural roads materials by 4.79%, maintenance of the municipality roads materials by 3.67%, development of the municipality roads materials by 3.50%, maintenance of outside roads materials by 3.66%, and development of outside roads materials by 3.73%.

**Figure5: Monthly Road Cost Indices in the West Bank during 2010
(Base Month December 2008 = 100)**

Chapter Four

Methodology

4.1 Data collection

Data on prices for consumer, producer, wholesale and construction are collected through visits conducted by trained staff to selected markets including groceries, supermarkets, cloth and clothing market, restaurants, general services office, hospitals, private schools, wholesalers and factories, etc., and construction product sources related to the index.

The interviewers were provided with questionnaires that included all required items and data sources along with detailed descriptions of goods and outlets.

Methodology was set to collect prices that cover all prices of goods and services according to its market cycling and turnover.

4.2 Editing and reviewing of data

By the end of data collection in all governorates, data are edited according to the following process:

- Logical revision to prices by comparing prices of goods and services with others in different sources and other governorates. Whenever a mistake is detected, it should be returned to the field for correction.
- Arithmetic revision of average prices for items in the governorates and the general average in all governorates.
- Field revision of prices through selecting a sample of collected price to the items.

4.3 Calculation of price indices

The price indices are calculated using **Laspeyres equation**. This equation applies weighting through base-period quantities. According to this equation, the index for each good is calculated first, then for each group which weighted by base period quantity until it becomes possible to calculate the general price index.

4.4 Weighting system

Weighting system for CPI:

The CPI weights reflect the relative significance of goods and services in the consumer basket. Data on household expenditure and consumption of goods and services represented in the consumer basket was collected through the Palestinian Expenditure and Consumption Survey (PECS), which was carried out during the year 2004.

The value of consumption of each item of goods and services in the consumer basket reflects the relative significance of that item in the total of Palestinian consumption patterns in that period. The overall value of the consumer basket is assumed to be one hundred thousand points (100,000). The relative significance of each item in the consumer basket is determined on the basis of assigning that item a relative weight (out of the total weight of 100,000 points), which is directly proportional to the relative size of that item in terms of the overall value of the basket.

Weights of various items in the consumer basket have been calculated for each of West Bank, Jerusalem J1, Gaza Strip, and the overall Palestinian Territory separately. This approach to construction of PCPI has allowed to produce a CPI for each of the regions separately.

Therefore, all item indices representing the Palestinian Territory are not calculated on the basis of weighted average for the three regions as it may look for some readers.

Weighting System for PPI:

The value of local production of each item of goods reflects the relative significance of that item in the totality of Palestinian Production for that period. The overall value of production is assumed to be one hundred thousand points (100,000). The relative significance of each item in the total production is determined on the basis of assigning that item a relative weight (out of the total weight of 100,000 points), which is directly proportional to the relative size of that item in terms of overall value of production.

Weights of various items in the total production are calculated individually for local production, export of local production and total production. Therefore, the total item index representing the Palestinian Territory is not calculated on the basis of averaging the two other Indices.

Weighting System for WHPI:

The value of local production of each item of goods reflects the relative significance of that item in the totality of Palestinian Production for 1996. The overall value of production is assumed to be one hundred thousand points (100,000). The relative significance of each item in the total production is determined on the basis of assigning that item a relative weight (out of the total weight of 100,000 points), which is directly proportional to the relative size of that item in terms of overall value of production.

Weights of various items in the total production are calculated individually for local production, import production and total production. Therefore, the total item index representing the Palestinian Territory is not calculated on the basis of averaging the two other indices.

Weighting System for CCI and RCI:

Data from Ministry of Public Works and Housing Council in addition to the Palestinian Contractors Union and some engineering offices was used for calculating the weight for construction and road Index.

Weight used to calculate the index of non-residential buildings was based on some of the projects implemented in 2007.

Weight used to calculate the index for residential buildings was based on data available for housing projects over the year 2007 from the Palestinian Housing Council.

Weight used to calculate the index of roads was based on some of the projects implemented in 2008.

Data Quality

5.1 Data accuracy

5.1.1 Statistical errors

The findings of the survey are affected by statistical errors due to using sampling in conducting the survey rather than comprehensive enumeration for the units of the target population, which increases the chances of having variances from the actual values we expect to obtain from the data had we conducted the survey using comprehensive enumeration. The computation of differences between the most important key goods showed that the Coefficient of Variation of these goods did not exceed 4.7%. The variance of the key goods in the survey was computed and dissemination was carried out on the level of the Palestinian Territory for reasons related to sample design and computation of the variance of the different indicators since there was a difficulty in dissemination of results at governorate level for lack of weights.

5.1.2 Non-statistical errors

Non-statistical errors are probable in all stages of conducting the project during data collection or data entry. The non-statistical errors can be summarized in the following:

- Non-response errors: The selected sources of this year showed major cooperation with interviewers; not a single case of non-response was reported this year.
- Response errors (respondent), interviewing errors (interviewer), and data entry errors: To avoid this type of error and reduce their effect, project administration adopted a number of procedures that ensured their reduction to the lowest level. The procedures include:
 1. With respect to respondents: More than one visit was made to every source to explain the objectives of the survey and emphasize the confidentiality of the data. The number of field visits in 2008 was limited and did not exceed 10 due to the situation in the Palestinian Territory and occupation's procedures. However, the visits to data sources contributed to empowering relations, cooperation, and verification of data accuracy.
 2. Interviewer's errors: A number of procedures were taken to empower data accuracy throughout the process of field data compilation. These procedures included:
 - a. Interviewers were selected based on educational qualification, competence, and assessment. Interviewers were trained in theory and in practice on the questionnaire.
 - b. Also, meetings were held to remind interviewers of instructions. In addition, explanatory circulars were handed out about the survey.
 3. Data entry errors: A number of procedures were taken to verify data quality and consistency and empower data accuracy throughout processing and entry. The procedures included the following:
 - a. Data entry staff were selected from persons specialized in computer programming; they were trained fully on the entry program.
 - b. Data verification was carried out for 10% of the entered questionnaires to ensure that the data entry staff entered questionnaires correctly and in accordance with the questionnaires provisions. The result of the verification was 100% consistent with original data.
 - c. The files of the entered data were received, examined, and reviewed by project administration before findings were extracted. The project administration carried out many checks showing data logic and coherence. An example of these checks

was comparing the data of current month with the data of previous month, comparing the data of the sources, and comparing data between governorates.

5.1.3 Other technical remarks

There are some important technical remarks that must be taken into consideration upon reviewing this report; they are as follows:

1. The sources at rural areas and refugee camps were not counted due to lack of adjusting weights for such areas. It was considered sufficient to select sources from main cities in the West Bank, Gaza Strip, and Jerusalem. The sources of data compilation were distributed among the main cities in the governorates of the Palestinian Territory as follows:

West Bank: Tulkarm, Jenin, Qalqiliya, Nablus, Ramallah, Jericho, Bethlehem, and Hebron

Gaza Strip: Gaza and Jabalia, Khan Yunis and Rafah, Deir al-Balah and al-Nusseirat

Jerusalem J1: It is the part of Jerusalem J1, which Israel annexed by force in the aftermath of occupying the West Bank in June 1967.

2. Some cases of change to the types of data sources appeared when the field survey was conducted. They included changing the activities of some sources or permanent or temporary closure of the source. These cases were dealt with through scientific statistical methods in addition to upgrading goods according to changing quality or quantity following international recommendations.
3. Data classification was in accordance with international recommendations. The recommendations of national accounts concerning classification of consumer groups were adopted using COICOP. As for price indices tables for product price and wholesale, the International Standard Industrial Classification ISIC3 was adopted.

Summary of variance calculation for the most important items during 2010

Item Description	Estimate	Standard Error	95% Confidence Interval		Coefficient of Variation
			Lower	Upper	
Long grain profile rice -Uncle Ben's - USA -Pack/ 1kg	12.15	0.529	11.11	13.18	0.044
Haifa white flour - Zero - Israel - Sack/ 60kg	157.63	1.995	153.71	161.55	0.013
White bread - Local -1kg	3.62	0.077	3.47	3.77	0.021
Fresh beef meat - Local - 1kg	48.89	0.314	48.28	49.51	0.006
Fresh chicken with feathers - Local - 1kg	15.48	0.202	15.08	15.88	0.013
Powdered milk - Nido - France - Can/ 2.5kg	97.61	0.415	96.80	98.43	0.004
Chicken eggs - Local - Carton/ 2kg	14.58	0.257	14.08	15.08	0.018
Olive oil I- Local - 1kg	33.62	0.395	32.85	34.40	0.012
Large size banana - Israel - 1kg	3.81	0.092	3.63	3.99	0.024
Red apple - Israel - 1kg	5.71	0.079	5.55	5.86	0.014
Green house tomato - Local - 1kg *	3.67	0.313	3.06	4.29	0.085
Greenhouse cucumber - Local - 1kg	2.70	0.127	2.45	2.95	0.047
Medium size potato - Israel - 1kg	3.12	0.058	3.01	3.23	0.019
Fine white sugar - White sugar - Israel - Pack/ 1kg	4.00	0.066	3.87	4.13	0.016
White table salt- First table - Israel - Pack/ 1kg	1.63	0.068	1.50	1.77	0.042
Imperial - Local - 20 cigarettes	16.08	0.512	15.08	17.09	0.032
Propane tank - Local - Tank/ 12kg	65.94	0.894	64.19	67.70	0.014
Diesel for heating - Israel - 1 liter	5.58	0.043	5.50	5.67	0.008
Excellent gasoline 96 - Israel - 1 liter	6.20	0.025	6.15	6.25	0.004
Locally manufactured gold - karat 21	130.18	1.483	127.27	133.10	0.011

* The high coefficient of variation in the prices of tomatoes is due to the oscillation in prices of tomatoes during 2010 especially in the fourth quarter of 2010.
