## **Acknowledgment**

Without the efforts spent by the team who worked on producing this manual and the cooperation of all departments in PCBS, it was impossible to bring it into light. The Palestinian Central Bureau of Statistics extends its deep thanks to all Team Work members who participated in preparing this manual and everyone who contributed to completion.

## **Preface**

In the framework of its permanent and organized endeavor to promote and consolidate the Palestinian statistics system on strong bases, Palestinian Central Bureau of Statistics (PCBS) perseveres on hard and purposeful work, to improve the quality of statistical work and its outputs to the best levels, and in all fields. PCBS represented by top management, believes in the importance of standardization and unification of statistical concepts if it is required to this Palestinian institution to move forward guided with clear strategy toward the desired goal, which is to build and consolidate the Palestinian statistics system.

PCBS worked since the beginnings, on the commitment to scientific principles armed by the latest technologies available to counteract (with ability witnessed by everyone) the production of the correct and accurate statistical indicators, on time, and present them to decision-makers and all users in order to be its contribution the required efficiency and milestone value in servicing building and progress.

In this context PCBS is issuing the manual of statistical indicators which provides to public and decision-makers, believing in the importance to offer such manuals in the hands of all partners within the circle of interest in statistical work. This does not mean the absence of the contents of this manual previously, but as the observer will see that the Manual has been enriching of most important requirements of knowledge about the statistical indicator in terms of adding the definition, method, the unit of measurement, periodicity, and others such as the concepts necessary to learn more about this important aspect of statistical work, in the hope to continue updating this Manual and those interested in getting what they want in less time and effort as possible.

PCBS hopes through the provision of this Manual about statistical indicators to provide and to make a further step together with his loyal partners towards a promising future, and always with confident footsteps, as long as life, and as long as the hope.

# **Chapter One**

## **Introduction**

It is known that basic product of statistical institutions is the statistical figure, which means the statistical indicator, and when talking about the statistics quality we talk about the quality of the statistical indicator itself, its accuracy, the extent of this indicator to be benefit for decision maker and researcher and whoever or wherever the regular user is, and on suitable time.

Indicators in this Manual selected according to the following main criteria:

- 1- Needs of decision makers and researchers in the country, at different environmental, economic, and social levels.
- 2- Clear, explicit and serve as a basis for comparisons on temporal and spatial level, local and international.
- 3- Generally, must be consistent with the standards adopted worldwide.
- 4- Should base basically on unified international standards.
- 5- And finally to be built on defined data sources, documented, to be subject to express it quantitatively, and logic to allow continuous controlling through time.

Statistical indicators are multipurpose tool, as they contribute to monitor economic and social changes on national level, and by following-up these indicators, development plans are prepared to improve the status of activities that experiencing a lack of performance, and through these indicators, users can monitor the reality and specify requirements according to scientific ground.

The number of indicators in this Manual is 611 distributed on the statistical directorates as follows: 243 indicators of them belong to population and social statistics, which represents 39.8%, 206 indicators belong to geographical and environment statistics which represents 33.7%, and there are 161 indicators belonging to economic statistics which represents 26.3%, and finally there is only one indicator for the martyrs and detainees which represents 0.2% of the total number of indicators.

## **Chapter Two**

### **Statistical Indicator**

It is an expression of the reality of a phenomenon in a specific time and place could be expressed in absolute or relative number, or as a "Rate", monitors a prevailing condition or a particular situation, and can be interpreted and explained through the use of verbal expression.

Good indicator described as:

- 1- Suitable and expresses local needs.
- 2- Capable to summarize the information without prejudicing the content.
- 3- Subject to coordination and construction, and allows for international comparisons.
- 4- Accurate.
- 5- Reliable.

Indicator should serve to perform the following activities:

- 1- Measure the achievements of planned goals.
- 2- Identifying undesirable problems and cases.
- 3- To respond to concerns of politicians.
- 4- Examine the results of indicators use.
- 5- Compare its value to specific reference values and to its own value during different periods of time.

In this context, the statistical indicator must refer to a specific point. Imagine yourself refer to a point on the wall using one finger not two, and you try to make your finger straight heading to that point such that you stand in a place that does not obscure the vision from the person you meant to guide to that point . Although there would be other points around the point that you meant and you make every effort to exclude those points through additional directions. Exactly like that, statistical indicator must work, it is a number (your own finger) that is based on information and a large work (your hand and body), and that covers specified time (guidance time), a specific place (the wall and point on it), and a specific topic (the point itself and nothing else).

## Manual Evolution

This Manual provides a detailed explanation of each of the statistical indicators produced by all directorates, departments and specialized programs in PCBS, which has been collected by a team of staff representatives of the departments in the institution. Where they adopted primarily on indicators published by PCBS in the reports and patrols and publications, all indicators defined according to the international references available, but in the absence of such international reference, the team have to resort to other definitions by the professionals, and the same thing for the method of calculation and the rest of the information for each indicator included in this guide.

An important developments made to the "2013 version" is the addition of a new description for each indicator under the title " level of details" or "variables" where detailed levels covered by each indicator in this Manual have been identified.

Example (1):

The main indicator " Percentage of Smokers " and to add in the column devoted to the levels of details: By the practice of smoking habit (Smoke hookah, Cigarettes, Pipes, Who do not smoke and never smoke before, Who had usually smoking earlier and stopped).

Example (2):

The main indicator: "Annual Average Price of Energy Forms" and to add in the column devoted to the levels of details: By Type of Fuel (gasoline, diesel, gas, kerosene, oil and grease, bitumen, coal, firewood).

The Manual contains a total of 611 main statistical indicators which produced and published by PCBS and cover all social, economic, demographic and environmental topics.

This Manual, does not pretend that it includes all indicators about the data that PCBS publishes, there are certainly indicators that could not be included by authors for a variety of reasons, but the most important that they tried to focus on main indicators.

Those who have worked on manual of statistical indicators this year (2015) in response to the pursuit of PCBS to link indicators manual to glossary of statistical terms conduct preliminary steps to facilitate that. One of these steps, for example, amendments to the indicators manual in order to bring it into line with glossary, including merging education and culture indicators under one subject "Education and Culture statistics", and adding Israeli settlements indicators to the subject of "Land Use statistics", separation of transportation and telecommunications indicators to have each of them as a subject separately, separating the subject of " detainees statistics" on "geographical and environmental statistics" to become a separate subject as " detainees and martyrs statistics".

Furthermore construction statistics title has been modified to "constructions and establishments statistics", and "labor force statistics" to "work statistics".

Finally re-arranging indicators in the manual so that the indicators belong to economic statistics in the lead, followed by geographical and environmental statistics, population and social statistics, and at last the detainees and martyrs statistics.

Each of them has given a title "area" and (indicators) come under its own topics.

Every indicator in the manual has been giving code consists of seven digits so that each code indicates to one indicator, the code will be deleted if the indicator has been deleted, and the code of the indicator would not change if we added new indicators, but every new indicator takes its own new code. Reference was made in more detail about the indicator code and explains it with an example in the next chapter (how to use this manual).

PCBS hopes that issuing of this manual is an ongoing process to monitoring statistical indicators according to international standards, and to making comparisons of Palestinian achievements and progress made in social, economic, and environmental areas. Moreover, this manual is a motivation for policy makers and researchers to increase their reliance on statistics figures in their policies, decisions and research. In conclusion, it must be pointed out that this manual was consistent with international standards and what is available in our data.

### How to Use this Manual

Indicators Manual is available as hardcopy and softcopy, the indicators were distributed according to subject and area, in a manner similar to the glossary. The following table will help in how to deal with the manual.

Area	Area Code	Subject Name	Subject Code
Economic Statistics	15	National Accounts	1510
		Balance of Payments	1515
		Foreign Trade	1520
		Prices Indices	1525
		Construction and Establishments	1530
		Transportation	1535
		Transportation and Storage	1536
		Transportation sector (Outside Establishments)	1537
		Telecommunications	1540
		Information and Telecommunications	1541
		Internal Trade	1545
		Services	1550
		Industry	1555
		Finance and Government	1560
Geographical and environment Statistics	20	Tourism	2010
		Housing and Housing Conditions	2015
		Environment	2020
		Water	2025
		Energy	2030
		Land Use	2035
		Agriculture	2040
Population and Social Statistics	25	Population & Demography	2510
		Work	2515
		Science & Technology	2520
		Living Standards	2525
		Education & Culture	2530
		Health	2535
		Security and Justice	2540
		Gender	2546

Martyrs & Detainees Statistics	40	Martyrs & Detainees	4010
--------------------------------	----	---------------------	------

The indicator code consists of 7 digits, representing the area with the first and the second digits, while third and fourth digits represent the topic within the area, and the last three digits indicate the serial number of the, and the last three digits indicate the serial number of the indicator, and the indicator has been prepared to allow the addition of new topics within the area or new indicators within the same subject, like the glossary of statistical terms and in accordance with, to facilitate linking indicators manual with statistical terms later.

**Example :**

The code (1510001) from left to right indicates to the area of Economic statistics with the symbol (15) and the subject of National accounts Code (1510), and the three digits from the right refers to the serial number of the indicator that start from (001) to refer to the indicator number one in the subject which is the indicator (Gross Value Added). Thus, the knowledge of the indicator code only gives information about the area and the subject of the order of the indicator and the indicator within the subject and thus within the the manual. The indicators also have been arranged alphabetically within each subject.
