Acknowledgment

The Palestinian Central Bureau of Statistics (PCBS) would like to thank the Palestinian households, who responded to the survey instrument, for their understanding during the fieldwork, which was truly remarkable.

The funding for the Labour Force survey was provided by the Palestinian National Authority (PNA), and the Core Funding Group (CFG) for 2009. CFG members include the Representative Office of Norway to PNA; the Swiss Agency for Development and Cooperation (SDC).

PCBS extends its gratitude to the members of the CFG for their support.

Notes for Users

1. (-) in tables means observations are too small.
2. The numbers included in Table (1) for the Years 2006 to 2009 are estimates based on the results of the Population, Housing and Establishment Census, 2007

Preface

The PCBS is pleased to present the fifteenth annual report on the Palestinian Labour Force Survey Programme. This programme consists of an integrated series of labour force surveys, the first of which was issued in October 1995. The Palestinian Labour Force Survey Programme conducts surveys quarterly.

The main objective of collecting data on the Palestinian labour force including components of employment, unemployment and underemployment, is to provide basic information on the relative size and structure of the Palestinian labour force. Data collected at different points in time provide a basis for monitoring current trends and changes in the labour market and in employment. These data supported with information on other aspects of the economy provide a basis for the evaluation and analysis of macro-economic policies.

This report provides data on labour force, covering standard classifications, economic activity, occupation, employment status, and other related variables, as well as the demographic characteristics of the work force (population aged 15 years and Over).

We hope that this report will provide Palestinian planners, researchers and decision makers with revised and accurate statistical data on the Palestinian labour market.

Executive Summery

The PCBS has started conducting a continuous labour force household survey since October 1995. By the end of 2009, 55th rounds of labour force survey has been conducted on a seasonal bases except the first two rounds that were conducted biannually.

The main objective of collecting data on the labour force and its components, including employment, unemployment and underemployment, is to provide basic information on the size and structure of the Palestinian labour force. Data collected at different points in time provide a basis for monitoring current trends and changes in the labour market and in the employment situation. These data, supported with information on other aspects of the economy, provide a basis for the evaluation and analysis of macro-economic policies.

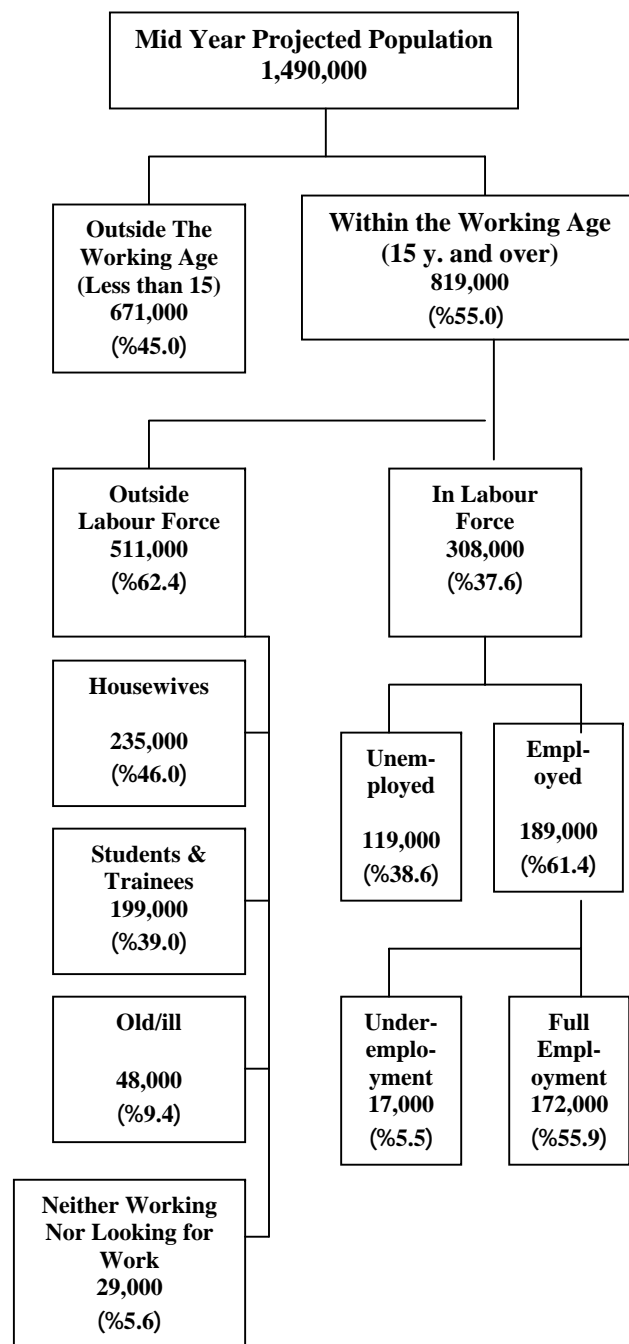

This report focuses mainly on labour force key indicators, main characteristics of the employed, unemployed, underemployed and persons outside labour force, labour force according to level of education, distribution of the employed population by occupation, economic activity, place of work, employment status, hours and days worked and average daily wage in NIS for the employees.

Labour Force Status:

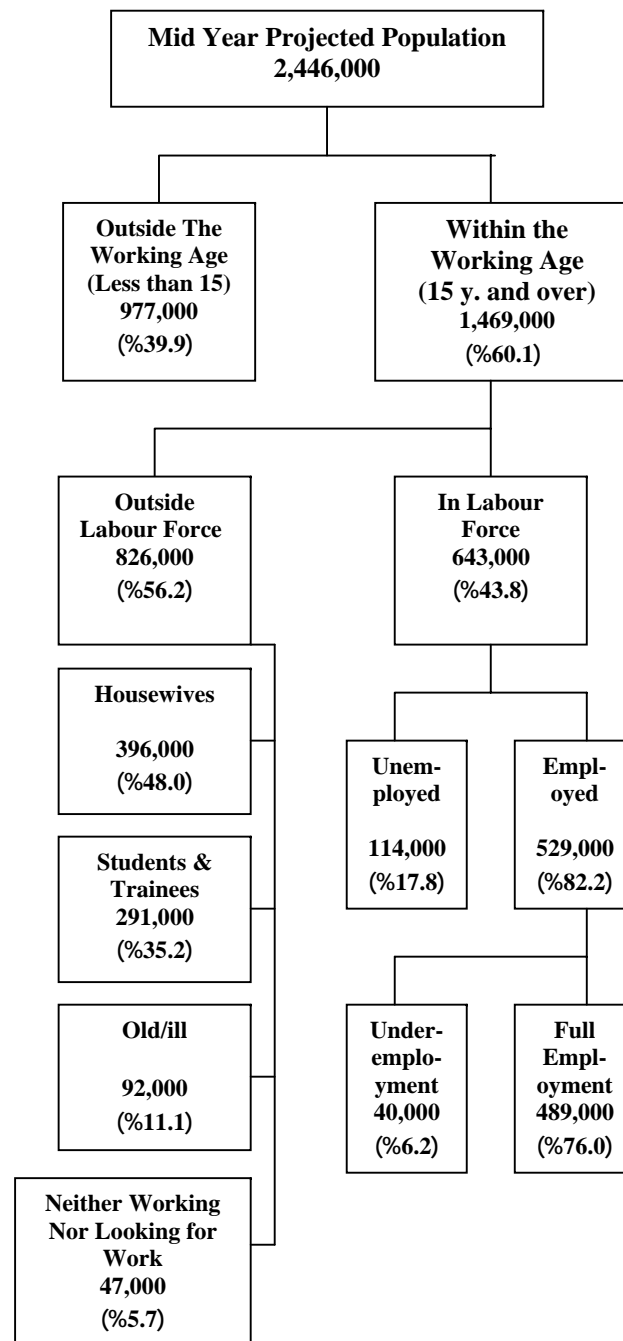

Labour force survey witnessed different phases of the Palestinian economy due to unstable political situation and the strict imposed closure on the Palestinian Territory, where the impact of these conditions on labour force was clearly reflected negatively on unemployment rate since September 2000.

Unemployment rate was 11.8% in 1999 and 14.1% in 2000 and reached 24.5% in 2009. The following diagram presents the status of the major components of labor force in the Palestinian Territory in 2009.

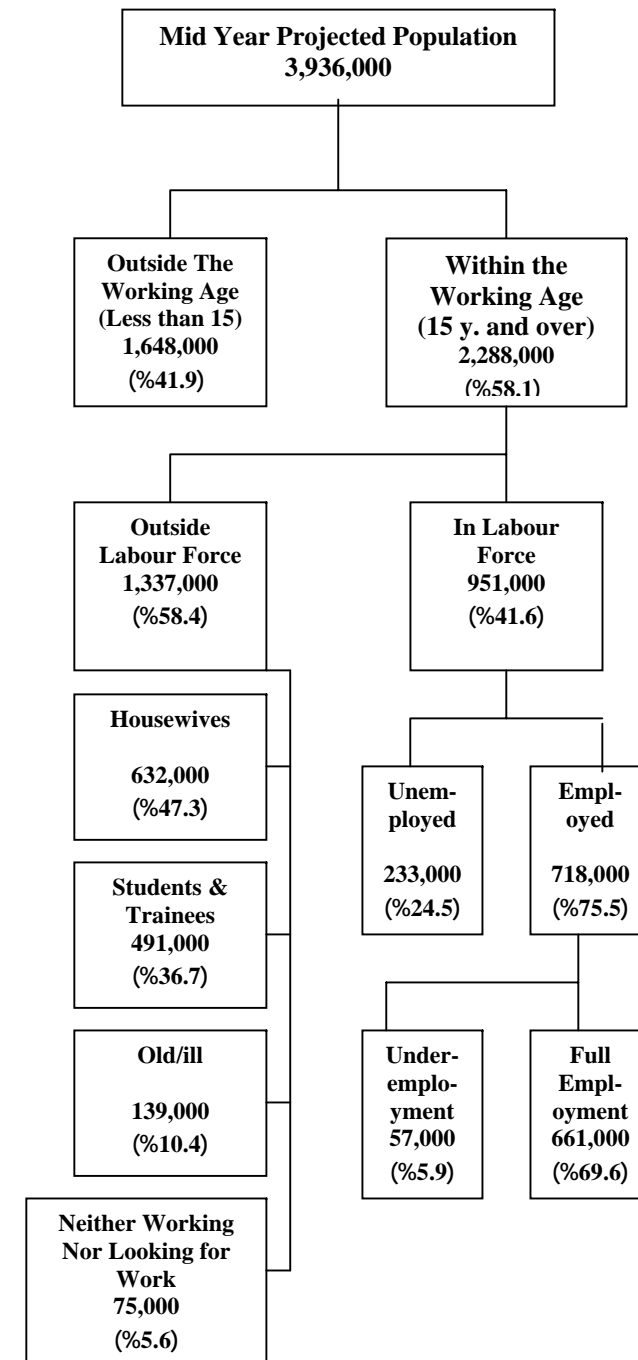

Labour Force Framework in Gaza Strip: 2009

Labour Force Framework in the West Bank: 2009

Labour Force Framework in the Palestinian Territory: 2009

Note: Full Employment and Underemployment are the percentages out of the total Labour Force

Chapter One

Introduction

1.1 Survey Objectives

The main objective of collecting data on the labour force and its components, including employment, unemployment and underemployment, is to provide basic information on the size and structure of the Palestinian labour force. Data collected at different points in time provide a basis for monitoring current trends and changes in the labour market and in the employment situation. These data, supported with information on other aspects of the economy, provide a basis for the evaluation and analysis of macro-economic policies.

1.2 Report Structure

This report consists of five chapters. The first chapter presents a background on the labour force survey programme and survey objectives. The second chapter presents the main definitions used in developing the questionnaire and other research tools, in addition to data collection and tabulation. The third chapter presents the main findings: labour force key indicators, main characteristics of the employed, unemployed, underemployed and persons outside labour force, labour force according to level of education, distribution of the employed population by occupation, economic activity, place of work, employment status, hours and days worked and average daily wage in NIS for the employees.

The fourth chapter discusses the methodology used in the survey, including questionnaire design, sampling frame, sample design and sample weights calculations. This chapter also describes the recruitment and training of interviewers and supervisors, fieldwork operations, data processing, coding and editing after data entry and tabulation.

The fifth chapter includes a descriptive assessment of data quality, including non-response rate and its components.

Chapter Two

Concepts and Definitions

This chapter presents the main concepts and definitions used in the survey. These concepts are based on the international standards taking into account the Palestinian labour market's circumstances.

Household:

One person or a group of persons living together who make common provision for food or other essentials for living. Household members may be related, unrelated, or combination of both.

Population of Working Age:

All persons in the West Bank and Gaza Strip aged 15 years and over.

Reference Week:

The week ending on Friday preceding the interviewer's visit to the household.

Work:

Includes any activity for wage or salary, for profit or family gain, in cash or in kind. One hour or more of such activity constitutes work. Work also includes unpaid activity on a family farm or business.

Labour Force:

The economically active population (Labour Force) consists of all persons 15 years and over who are either employed or unemployed as defined over at the time of survey.

Employed:

All persons aged 10 years and over who were at work at least one hour during the reference week, or who were not at work during the reference week, but held a job or owned business from which they were temporarily absent (because of illness, vacation, temporarily stoppage, or any other reason). Employed persons are classified according to employment status as follows:

1. Employer:

A person who operates his or her own economic enterprise or engages independently in a profession or trade, and hires one or more wage employees.

2. (Self-employed) own-account worker:

A person who operates his or her own economic enterprise or engages independently in a profession or trade, and hires no employees.

3. Employee:

A person who works for a public or private employer and receives remuneration in wage, salary, commission, tips, piece-rates or pay in kind.

4. Unpaid family member:

A person who works without pay in an economic enterprise operated by a related person living in the same household.

Unemployed (According to the ILO Standards):

Unemployed persons are those individuals 15 years and over who did not work at all during the reference week, who were not absent from a job and were available for work and actively seeking a job during the reference week. Persons who work in Israel and were absent from work due to closure are considered unemployed, and also those persons never work and not looking for work but waiting to return to their works in Israel and settlements.

Unemployed (According to the Relaxed Definition):

The Number Of Unemployed Persons was calculated under the definition by adding to unemployed Persons according to the ILO Standards, those Persons outside labour force because they were frustrated.

Underemployment:

Underemployment exists when a person's employment is inadequate in relation to alternative employment, account being taken of his\her occupational skills. The underemployed persons are classified into two groups:

1. Visible Underemployment:

Visible underemployment refers to insufficient volume of employment:

persons worked less than 35 hours during the reference week or worked less than the normal hours of work in their occupation were considered as visibly underemployed.

2. Invisible Underemployment:

Invisible underemployment refers to a misapplication of labour resources or fundamental imbalance as between labour and other factors of production, such as insufficient income, underutilization, or bad conditions of the current work, or other economic reasons. In this survey, employed persons are classified as invisibly underemployed if they are not already classified as visibly underemployed; and want to change their jobs because of an insufficiency of income, or because they are working in an occupation which does not correspond to their qualification.

Main Job:

The job at which the person usually works the most hours in his\her main job. If a person usually works the same number of hours at two jobs, the "main" job is the job at which the person has been employed the longest.

Full Time Job:

Any job that is usually performed for 35 hours or more per week is considered full-time. In some occupations, usual weekly work schedules of less than 35 hours per week are considered to be full-time. For these cases, the option "normal hours are full time" is provided.

Part Time Job:

A job in which a person works less than 35 hours, unless the number of usual work hours is less than 35. In addition, a job is a part time job if the hours worked by a person were less than usual work hours in such job.

Occupation:

Occupation refers to the kind of work done during the reference period by the employed person, or the kind of work done previously if unemployed, irrespective of the economic activity or the employment status of the person. Occupations are grouped together mainly on the basis of the similarity of skills required to fulfill the tasks and duties of the job. Occupations are classified according to the International Standard Classification of Occupation (ISCO 1988).

Economic Activity:

Economic activity refers to the activity of the establishment in which an employed person worked during the reference period, or last worked if unemployed. This activity is defined in terms of the kind of goods produced or services supplied by the unit in which the person works. Economic Activity activities are classified according to the unified commodity classification in the West Bank and Gaza Strip which is based on the International Standard Classification of All Economic Activities (ISIC Rev3).

Absent from Usual Work:

All those who were absent from their usual work during the reference week, due to illness, holiday, strike, curfew, lock-out, temporary work stoppage, or due to some other reasons.

Seeking Work:

Seeking work is defined as having taken specific steps in the reference week to find paid employment or self-employment. Job seekers are classified into:

1. Available for work: A person ready to work if he\she is offered any job, and there is no reason preventing him\her from accepting such a job although he\she did nothing to get a job.
2. Actively seeking work: A person who is willing to work and is actively seeking work through reading newspaper advertisement, asking friends, registration at the labour exchange offices, or asking employers.

Persons Outside Labour Force:

The population not economically active comprises all persons 15 years and over, who were neither employed nor unemployed accordingly to the definitions over.

Retirement\ Revenues:

The person who haven't work and doesn't want to work due to having a constant revenues or retired remittances.

Years of Schooling:

The number of regular years of study completed successfully. Repetition years and irregular study or courses are not taken into account.

Hours Worked:

Total number of hours actually worked during the reference period as well as overtime and time spent at the place of work on activities such as preparation of the workplace. Leaves, meal breaks and time spent on travel from home to work and vice versa are excluded from work hours.

Monthly Work Days:

Number of days at work during the month, excluding week-ends, holidays, sick and other paid or unpaid leaves. One hour of work in a given day is considered as one work-day.

Daily Wage:

Cash net wage paid to the wage employee from the employer. Wages received in different currencies are converted into New Israeli Shekels according to the exchange rate in the survey period

PSUs: Primary Sampling Units

SPSS: Statistical Package for Social Sciences

SAS: Statistical Analysis System

EAs: Enumeration Areas

NIS: New Israeli Shekel

Chapter Three

Main Findings

3.1 Labour Force Participation (ILO Standards)

The results indicated that the labour force participation rate was 41.6% in 2009 compared with 41.3% in 2008. The males participation rate was 67.0% in 2009 compared with 66.8% in 2008, and for females it was 15.5% in 2009 compared with 15.2% in 2008.

As well, results revealed that the highest labour force participation rate for the persons aged 35-44 years was 58.1%; with 93.3% for males and 21.4% for females. Then the labour force participation rate for persons aged group 25-34 years was 57.0%; 88.8% for males and 24.0% for females. On the other hand the labour force participation rate for persons aged 15-24 reached 26.7%; 43.2% for males and 9.5% for females.

The distribution of the participation in the labour force by region in 2009 revealed that labour force participation rate in the West Bank reached 43.8%; of which 69.5% for males and 17.4% for females. The results indicated that the labour force participation rate in Gaza Strip is much lower than in the West Bank. The rate in Gaza Strip reached 37.6%; 62.5% for males and 12.2% for females.

3.2 Labour Force Participation (Relaxed Definition)

The results indicated that the labour force participation rate was 44.8% in 2009, while it was 44.7% in 2008.

The labour force participation rate in the West Bank reached 46.9% in 2009, compared with 46.7% in 2008, while in Gaza Strip it was 41.0% in 2009 compared with 41.2% in 2008.

3.3 Employment (ILO Standards)

Results revealed that 39.6% of employed persons are working in services, while 19.1% are working in commerce, hotels and restaurants. The results indicated that services are the main field of employment for females; about 61.8% of employed women work in services. Agriculture provides job opportunities to about 20.5% of females in the Palestinian Territory. (Table 21)

The survey results showed that employed persons in 2009 were distributed according to place of work into 63.4% working in the West Bank, 26.4% working in Gaza Strip, and 10.2% working in Israel and Israeli settlements. The result indicated that the percentage of employed persons in Israel and Israeli settlements was 11.6% in 2008 compared with 10.2% in 2009, the percentage of employed persons from the West Bank in Israel and Israeli settlements was 15.6% in 2008 compared with 13.9% in 2009, whereas in Gaza Strip there was no access for the workers to work in Israel or Israeli settlements since 2006.

As well, employed persons are distributed by employment status: 6.3% are employers, 19.2% are self employed, 66.5% are wage employees, while 8.0% are unpaid family members.

About 25.5% of employed persons have worked as professionals, technicians and clerks, while 15.6% are employed in craft and related trade workers, Also 15.6% employed in elementary occupations, and about 9.0% employed as skilled agriculture workers.

The results indicated that the percentage of employed persons in the public sector in the Palestinian Territory was 25.2% in 2009 compared with 24.7% in 2008, the percentage in Gaza Strip was 48.1% in 2009 compared with 46.8% in 2008, While it was 17.0% in 2009 in the West bank compared with 16.8% in 2008.

The results revealed that the employed persons in the private sector in the Palestinian Territory was 64.6% in 2009 compared with 63.8% in 2008, and it was 51.9% in 2009 in Gaza Strip compared with 53.2% in 2008, while it was 69.1% in 2009 in the West Bank compared with 67.5% in 2008 for the same period. (Table 41).

About the average wages for wage employees by sector, the results indicated that the average daily wage for the employees in the Palestinian Territory in the public sector was about 84.4 NIS; 90.2 NIS in the West Bank against 72.3 NIS in Gaza Strip. On the other hand the average daily wage for employees in the private sector was about 77.0 NIS; 83.6 NIS in the West Bank and 55.0 NIS in Gaza Strip.

The results indicated that the overall average of monthly work days is 22.3 days, 22.4 for employees working in the West Bank compared with 23.6 for those working in Gaza Strip, and 20.3 days for those working in Israel and Israeli settlements. The overall average weekly work hours is 42.5, of which 41.7 hours for employees working in the West Bank compared with 39.4 hours for those working in Gaza Strip, while 41.7 work hours for wage employees working in Israel and Israeli settlements.

3.4 Unemployment (ILO Standards)

The results revealed that the average unemployment rate in the Palestinian Territory 2009 was 24.5%, distributed as 24.1% for males and 26.4% for females. Results revealed that unemployment was concentrated among the youth aged 15-24 years at 38.9%; distributed as 37.2% for males and 46.9% for females.

In addition, unemployment rate in the West Bank reached 17.8%; with 17.6% for males and 18.8% for females. The highest unemployment rate was found in Qalqiliya governorate (23.4%), followed by Hebron (22.5%), Tulkarm (21.8%), then Bethlehem (20.2%), while the lowest unemployment rate was in Jericho & AL Aghwar (8.0%). (Table 8).

In Gaza Strip unemployment rate reached 38.6%; with 37.3% for males and 45.8% for females. Also the unemployment rate among the youth aged (15-24) reached 59.2% distributed as 57.2% for males compared with 68.5% for females

The highest unemployment rate in the Gaza Strip by governorate was in Khnyunis with 49.3%, followed by Rafah (38.4%), North Gaza (36.6%), then Deir Al-Balah (35.2%). While the lowest unemployment rate was in Gaza governorate with 34.4% . (Table 8).

The results indicated that 1.0% of the unemployed males and 0.5% of females had not completed one year of schooling. Conversely, about 86.8% of unemployed females and 17.2% of unemployed males have completed 13 or more years of schooling. (Table 53).

3.5 Unemployment (Relaxed Definition)

The results revealed that the average unemployment rate in 2009 is 30.1% distributed as 29.7% for males and 31.6% for females. In addition, unemployment rate in the West Bank reached 23.4%, and 43.8% in Gaza Strip.

3.6 Persons Outside Labour Force (ILO Standards)

The results indicated that about 58.4% of persons aged 15 years and over in the Palestinian Territory were outside labour force distributed as 33.0% among males and 84.5% among females. Regarding the distribution of persons outside labour force by reason, the results showed that 10.4% were classified as old or ill, 47.3% as housekeeping, 36.6% as students, and 5.7% for other reasons.

Chapter Four

Methodology

The methodology was designed according to the context of the survey, international standards, data processing requirements and comparability of outputs with other related surveys.

4.1 Questionnaire Design

The questionnaire included four parts: one for recording necessary elements for survey management and controls, another part for identifying the sample households, one for recording the household roster and the demographic characteristics of household members, and one for recording labour force characteristics of working age household members.

4.2 Sampling Frame and Sample

Target Population:

The target population consists of all Palestinians aged 10 years and over living in the Palestinian Territory, excluding persons living in institutions such as prisons or shelters.

Sampling Frame:

The sampling frame consisted of a master sample of enumeration areas (EAs) selected from the Population, Housing and Establishment Census 2007, the master sample consists of area units of relatively equal size (number of households), these units have been used as primary sampling units (PSUs).

4.2.1 Sample Design

The sample is a two-stage stratified cluster random sample.

Stratification:

Four levels of stratification were made:

1. Stratification by Governorates.
2. Stratification by type of locality which comprises:
 - (a) Urban
 - (b) Rural
 - (c) Refugee Camps

Sample Size:

The sample size was about 7,627 households in the 52th round and 7,627 households in the 53th round, and 7,677 households in the 54th round and 7,694 households in the 55th round, the total number of the households about 30,625 households, the number of completed questionnaires about 26,590 questionnaires, this number considered appropriate to provide estimations on main labour force characteristics in Palestinian Territory.

The sample size in 1st quarter, 2009 consisted of 7,627 households, which included 29,559 persons aged 10 years and over (including 23,901 aged 15 years and over). In the 2nd quarter the sample consisted of 7,627 households, which included 27,135 persons aged 10 years and over (including 22,124 aged 15 years and over), in the 3rd quarter the sample consisted of 7,677 households, which included 29,455 persons aged 10 years and over (including 23,907 aged 15 years and over). In the 4th quarter the sample consisted of 7,694 households; which included 30,053 persons aged 10 years and over (including 24,371 aged 15 years and over).

4.2.2 Sample Rotation

Each round of the Labor Force Survey covers all the 481 master sample areas. Basically, the areas remain fixed over time, but households in 50% of the EAs are replaced each round. The same household remains in the sample over 2 consecutive rounds, rests for the next two rounds and represented again in the sample for another and last two consecutive rounds before it is dropped from the sample. A 50% overlap is then achieved between both consecutive rounds and between consecutive years (making the sample efficient for monitoring purposes).

In earlier applications of the LFS (rounds 1 to 11); the rotation pattern used was different; requiring a household to remain in the sample for six consecutive rounds, then dropped. The objective of such a pattern was to increase the overlap between consecutive rounds. The new rotation pattern was introduced to reduce the burden on the households resulting from visiting the same household for six consecutive times.

4.3 Fieldwork Operations

Training and Recruitment:

The purpose of the training courses was to train fieldworkers the main skills needed to conduct interviews. Two training courses were held, one in Ramallah for the West Bank trainees, and one in Gaza City for Gaza Strip trainees. Each course consisted of two parts: one on survey methodology including survey design, questionnaire design, interviewing techniques, and field operations; and one part on specifications of the labour force survey, including concepts and definitions, fieldwork procedures, data collection, editing, coding, tips for asking questions and recording answers, as well as team work and field supervision.

The training courses included lectures and practical exercises. Each course lasted 3 days in which 20 interviewers and 4 supervisors were trained.

Data Collection:

The preparation phase for the LFS included recruiting and training of interviewers and supervisors. The staff on this project participated in previous survey projects at PCBS, and are highly qualified.

The West Bank was divided into three areas (North, Middle and South), each of which was supervised by one field supervisor. Each region consists of a number of govern orates, and the fieldwork was carried out by one fieldwork team, consisting of 2-3 interviewers.

Gaza Strip was also divided into three areas (North, Middle and South). Fieldwork activities were carried out by one fieldwork team, each consisting of a supervisor, an editor and 3 interviewers.

Special procedures were followed in order to ensure quality control and efficient organization of fieldwork. Such procedures are important for supervising work, as well as for receiving and delivering questionnaires, maps, sample lists in addition to other forms used for management and quality control.

Field operations were conducted in the Palestinian Territory from 01/01/2009 to 31/12/2009. Fieldwork teams were distributed to each area on the basis of the sample size. The number of LFS' fieldwork team was 24, including the fieldwork coordinator, 4 supervisors, 4 editors, and 16 interviewers including coders.

During fieldwork 30,625 households were visited in the Palestinian Territory, the end results for the interviews were become as follows:

Completed questionnaires	26,590
Not Available Unit	257
No Body in the House	772

Coding

At this stage, the economic activity variable underwent coding according to West Bank and Gaza Strip Standard Commodities Classification, based on the United Nations ISIC-3. The economic activity for all employed and ever employed individuals was classified at the fourth-digit-level. The occupations were coded on the basis of the International Standard Occupational Classification of 1988 at the third-digit-level (ISCO-88).

4.4 Data Processing

The data processing stage consisted of the following operations:

1. Editing Before Data Entry

All questionnaires were then edited in the main office using the same instructions adopted for editing in the field.

2. Data Entry

In this stage data were entered into the computer, using a data entry application designed in Access. The data entry program was prepared in order to satisfy the following requirements:

- Duplication of the questionnaire on the computer screen.
- Logical and consistency checks of data entered.
- Possibility for internal editing of questionnaire answers.
- Maintaining a minimum number of errors in data entry of numerical values and or errors from fieldwork.
- User- friendly in data entry and handling of questionnaires.

Data Quality

5.1 Accuracy of the Data

5.1.1 Statistical Errors

Since the data reported here are based on a sample survey and not on a complete enumeration, they are subjected to sampling errors as well as non-sampling errors.

Sampling errors are random outcomes of the sample design, and are, therefore, in principle measurable by the statistical concept of standard error. A description of the estimated standard errors and the effects of the sample design on sampling errors are provided in the previous chapter.

Data of this survey affected by statistical errors due to use the sample, Therefore, the emergence of certain differences from the real values expect obtained through censuses. It had been calculated variation of the most important indicators exists and the facility with the report. and the dissemination levels of the data were particularized at the regional level in Governorate in the West Bank and Gaza Strip.

5.1.2 Non-Statistical Errors

Non-statistical errors are probable in all stages of the project, during data collection or processing. This is referred to as non-response errors, response errors, interviewing errors, and data entry errors. To avoid errors and reduce their effects, great efforts were made to train the fieldworkers intensively. They were trained in how to carry out the interview, what to discuss and what to avoid, carrying out a pilot survey and practical and theoretical training during the training course.

Also data entry staff were trained on the entry program that was examined before starting the data entry process. To have a fair idea about the situation and to limit obstacles, there was continuous contact with the fieldwork team through regular visits to the field and regular meetings with them during the different field visits. Problems faced by fieldworkers were discussed to clarify any issues.

Non-sampling errors can occur at the various stages of survey implementation whether in data collection or in data processing. They are generally difficult to be evaluated statistically. They cover a wide range of errors, including errors resulting from non-response, sampling frame coverage, coding and classification, data processing, and survey response (both respondent and interviewer-related). The use of effective training and supervision and the careful design of questions have direct bearing on limiting the magnitude of non-sampling errors, and hence enhancing the quality of the resulting data. The following are possible sources of non-sampling errors:

Response and Non Response Rates:

Errors due to non-response because households were away from home or refused to participate. The overall non response rate amounted to almost 13.2% which is relatively low; a much higher rates is rather common in an international perspective. The refusal rate was only 1.2%. The errors of over coverage rate was only 5.4%. It is difficult however to assess the amount of bias resulting from non response. The PCBS has not yet undertaken any non-

response study. Such a study may indicate, that non-response is more frequent in some population groups than in others. This is rather normal and such information is necessary to be able to compensate for bias resulting from non-response errors.

Procedures quality control:

- Errors in data processing, such as coding and punching. The data underwent checking and completion of missing information in the office and logical checks were computerized as well as manually, including call-backs if needed.
- Response errors which resulted from misunderstanding of the questions, interviewers' bias in asking the questions and in probing. Thorough training, supervision, and various quality control checks were used to minimize bias resulting from these kinds of errors.

5.2 Possibility of comparison

In this section comparison will be made for a time series period and for sectors only, since there is not other recourses for comparison. Results indicated that the rate of labor force participation in 2009 did not have a large change compared with it in 2008. But this rate is obviously different between west bank and Gaza Strip it reached 46.9% and 41% respectively. Results also indicated that the unemployment rate was 26.0% in 2008 in the Palestinian Territory, compared with 24.5% in 2009. again the difference between West Bank and Gaza Strip is very large while it is 17.8% in West Bank it reached to 38.6% in Gaza strip. For sex, unemployment rate was 26.5% in 2008 compared with 24.1% in 2009 for males, but it was 23.8% in 2008 for females compared with 26.4% in 2009.

5.3 Technical Notes

There are important technical notes which should be taken into consideration when reviewing this report, which are as follows:

The numbers for the Years 2006-2008 are estimates based on the preliminary results of the Population, Housing and Establishment census, 2007

About the nominal daily wages exchange rates are used according to time period that data published.

The questionnaire of this survey was developed in away that permit to make comparison with labour force survey that conduct by the Israeli Central Statistical office, in the same time we improved the questionnaire to suite with international standards and Palestinian labour market.

As result of the critical situation which was dominant in Gaza strip during the implementation of the field work of the 1st, 2nd and 4th round in 2008, we could not collect data from all the households in the sample.
