Important Notes

Statistics presented at constant prices, using 2004 as the base year.

Data related to the first quarter of 2012 are preliminary estimates based on the available short-term indicators, taking into consideration that the final version of the Quarterly National Accounts will be issued after finalizing the necessary indicators. The data for the quarters 2011were revised based on the estimating the under-coverage of exports and imports upon balancing procedure for the Supply and Use sides of the economy.

Unemployment rate in the Palestinian Territory was 23.9 percent for the 1st quarter 2012, while it was 21.0 percent during the 4th quarter 2011 and 21.7 percent during the 1st quarter 2011. The unemployment rate was 20.9 percent in 2011, 23.7 percent in 2010, 24.5 percent in 2009, and 26.6 percent for 2008.

The unemployment rate in the West Bank for the 1st quarter 2012 was 20.1 percent, compared to 16.6 percent during the 4th quarter 2011 and 17.4 percent during the 1st quarter 2011. In the Gaza Strip, unemployment rate was 31.5 percent for the 1st quarter 2012, compared to 30.3 percent during the 4th quarter 2011 and 30.8 percent during the 1st quarter 2011.

Data related to Government (education, health, public administration and defense) were valued using Accrual Bases based on the recommendations of the System of National Accounts. Wages and salaries were obtained from the monthly report of the Ministry of Finance to estimate government activities, taking into consideration that data pertaining to expenditures in the public budget were reclassified based on the latest revision to the Government Finance Statistics Manual 2001.

PCBS: Press Report, Preliminary Estimates of Quarterly National Accounts (First Quarter 2012)

Main Results

An increase in GDP at constant prices in the Palestinian Territory during the 1st quarter 2012 compared to the parallel quarter (1st quarter 2011)

Preliminary estimates at constant prices showed an increase of 5.6 percent in GDP in the Palestinian Territory* during the 1st quarter 2012 compared to the 1st quarter 2011, and it showed a decrease of 3.1 percent compared to the 4th quarter 2011 at constant prices, and the base year is 2004. In the West Bank,* GDP increased by 5.4 percent during the 1st quarter 2012 compared to the 1st quarter 2011. In Gaza Strip, GDP increased by 6.0 percent during the 1st quarter 2012 compared to the 1st quarter 2011. GDP for the 1st quarter 2012 at constant prices was USD 1,116 million for the West Bank* and USD 464 million for Gaza Strip.

Gross Domestic Product Per Capita

GDP per Capita for the Palestinian Territory* at constant prices was USD 395 during the 1st quarter 2012, it showed an increase of 2.4 percent compared to the 1st quarter 2011. As for the West Bank* at constant prices it was USD 469 during the 1st quarter 2012, it showed an increase by 2.6 percent during the 1st quarter 2012 compared to the 1st quarter 2011, and for Gaza Strip was USD 286 during the 1st quarter 2012, and it showed an increase by 2.4 percent during the 1st quarter 2012 compared to the parallel quarter 2011.

The data excludes those parts of Jerusalem which were annexed by Israel in 1967.

PCBS: Press Report, Preliminary Estimates of Quarterly National Accounts (First Quarter 2012)

Concepts and Definitions

Statistical Unit

The United Nations System of National Accounts, SNA 1993, defines two main types of statistical units:

- Institutional Unit-Enterprise

It is an economic entity that is capable, in its own right, of owning assets, incurring liabilities and engaging in economic activities and in transactions with other entities.

- Establishment

An establishment is an enterprise, or part of an enterprise, that is situated in a single location and in which only a single (non-ancillary) productive activity is carried out or in which the principal productive activity accounts for most of the value added.

Economic Activity

Referring to a process, that is to say, to the combination of actions carried out by a certain entity that uses labour, capital, goods and services to produce specific products (goods and services).

Output

the value of the final products of goods and services produced by a certain establishment capable of being provided to other units though they can be self-consumed or for the purposes of self gross fixed capital formation. Production includes two categories: Final products and the so-called under-operating products, which means products that take a long time to produce such as livestock and establishment works. The value of the majority of goods can be estimated at the moment the production process is completed. However, the production of some goods may exceed the accounting period (such as the case of under-operating products). The value of such products is estimated and registered during that accounting period as, for example, the case of establishment works and winter crops.

Value Added

Value added is a central concept of production and refers to the generated value of any unit that carries out any productive activity. Gross value added is defined as the value of gross output less the value of intermediate consumption. The net value added is defined as the gross value less the value of fixed capital consumption.

Gross Domestic Product (GDP)

Gross Domestic Product or GDP is intended to be a measure of the value created by the productive activity of resident institutional units during a certain period in time. Estimate of GDP, like the output and the value added, can vary according to taxes and subsidies taken into consideration. GDP is usually estimated at market prices, producers' prices, or basic prices. There are three approaches to estimate the GDP: Output or Production approach, Expenditure approach, and Income approach.

Deflating

It is the process of changing all data at current prices to constant prices by choosing the suitable indices by which the effect of prices on the data will be isolated, and this could be done by choosing suitable base year.

Short-term Indicators

All indicators that have a periodicity for less than a year, usually month or quarter.

Industrial Production Index

A statistical tool used for measuring the change in volume of output of industrial activities during a certain period of time. The index uses the change in volume of production for the largest establishments in each industry.

Financial Intermediation Services Indirectly Measured (FISIM)

It equals the total of property income payable to financial institutions less gross value of payable interests on these institutions excluding property income receivable by investment of money of the same institution.

Final consumption groups:

Final consumption:

It is the consumption of households, government, and non-profit institutions. Therefore, the establishments' consumption is not considered final consumption since products used in the production process are considered as intermediate consumption.

Households' final consumption:

It is the expenditure on all goods and services excluding expenditure on building and construction, which are considered gross fixed capital formation for the property owners. Renting accommodation is classified as final consumption spent by households.

Government and non-profit institutions consumption:

Expenditure of the two sectors can be divided into two types: individual and collective. The first includes spending that benefits individuals on medical services, for instance. Collective expenditure has a public nature such as the government's spending on defense and security.

Gross capital formation:

Gross capital formation can be divided into three components: gross fixed capital formation, change in inventory, and net acquisitions of valuables. Henceforth, gross capital formation (or investment) can be defined as the total value of the three aforementioned components. It is measured at purchase price.

Gross fixed capital formation:

Is the total value of producers acquisitions less disposals of fixed asset during the accounting period plus certain addition to the value of non-produced assets released by the productive activity of institutional units, fixed assets are tangible or intangible assets produced as from process of production that are themselves used repeatedly or continuously in other process of of production for more than one year.

Change in the inventory:

the value of the goods entering the inventory less the value of the goods leaving the inventory. Goods must be valued at current prices, i.e., their prices at the time they enter or leave the inventory in order to avoid calculating unreal earnings of ownership. Change in the inventory also includes "under operating products".

Exports and imports of goods and services:

They include trading goods and services among residents and non-residents and selling, barter, and gifts.
