

The Palestinian Central Bureau of Statistics (PCBS)
and the Environment Quality Authority (EQA)

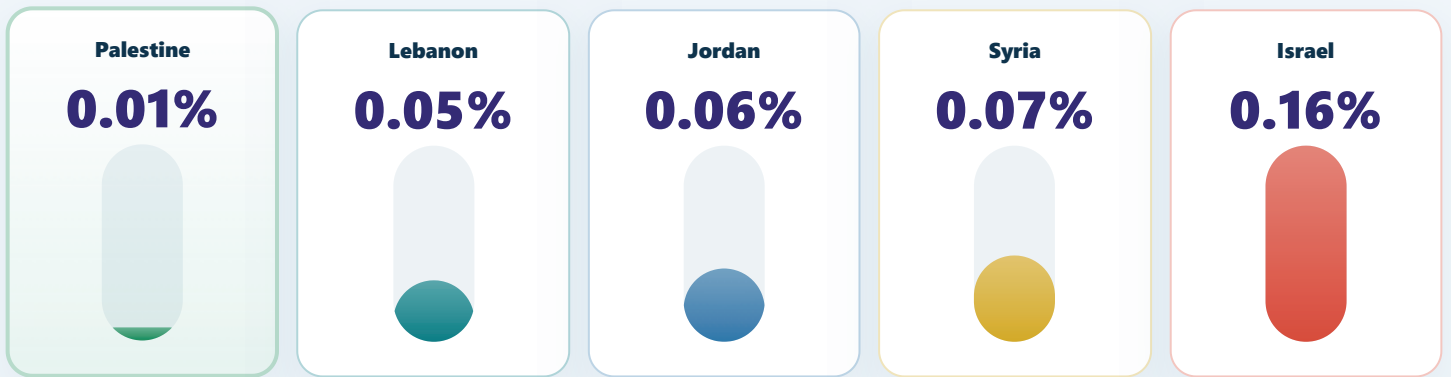

World Environment Day

This year's theme: "A Global Call for Climate Action"

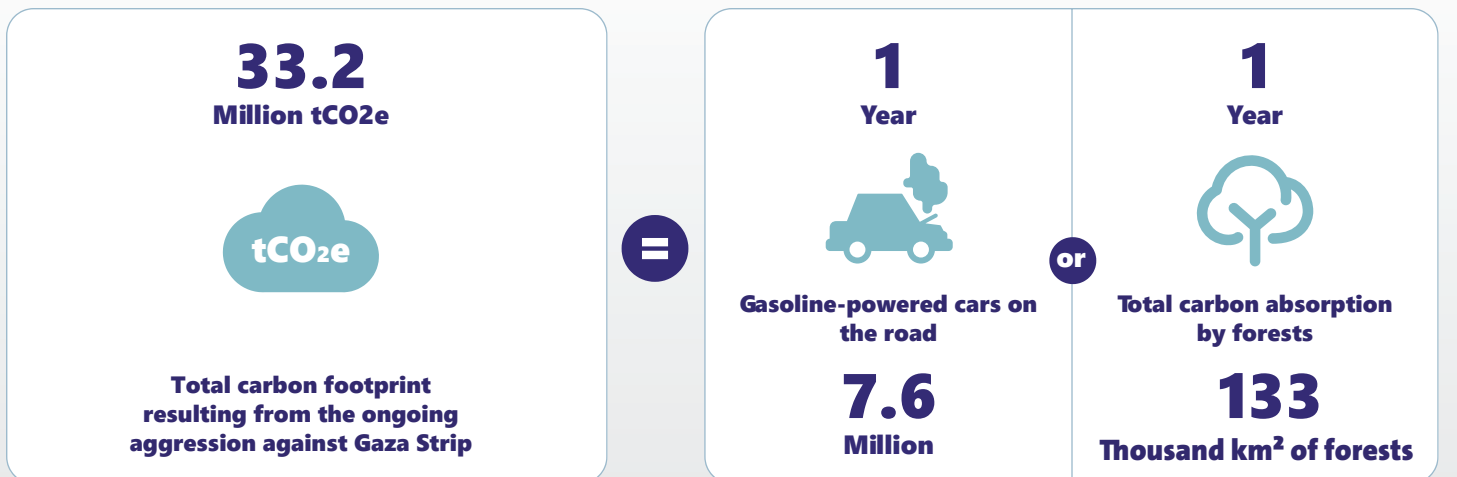

5/6/2026

🕒 Limited emissions... escalating climate impacts in Palestine

Ratio of national emissions to global emissions in countries of the region, 2023

The carbon footprint of the Israeli occupation and the hidden climate cost

Price of drinking water (in NIS) distributed by tankers in Gaza Strip, 2023-2025

One cubic meter of water (1000 lit)

2023
30
NIS

2024
160.4
NIS

2025
211
NIS

Widespread destruction of Gaza's sewage infrastructure and escalating public health threats

90%

Infrastructure damaged

1,545 km

Networks extensively damaged

47

Pumping stations

Escalating environmental pollution in Gaza amid the growing waste and rubble crisis

710

Thousand tons of household waste

60

Million tons of rubble

330

Thousand housing units destroyed

90%

Municipal equipment destroyed

86% of agricultural lands in Gaza Strip were destroyed

Percentage of agricultural lands destroyed by the Israeli aggression against Gaza Strip by governorate until 31/07/2025

86%

Agricultural land destroyed in Gaza Strip

North Gaza

94%

Gaza

91%

Deir Al-Balah

84%

Khan Yunis

81%

Rafah

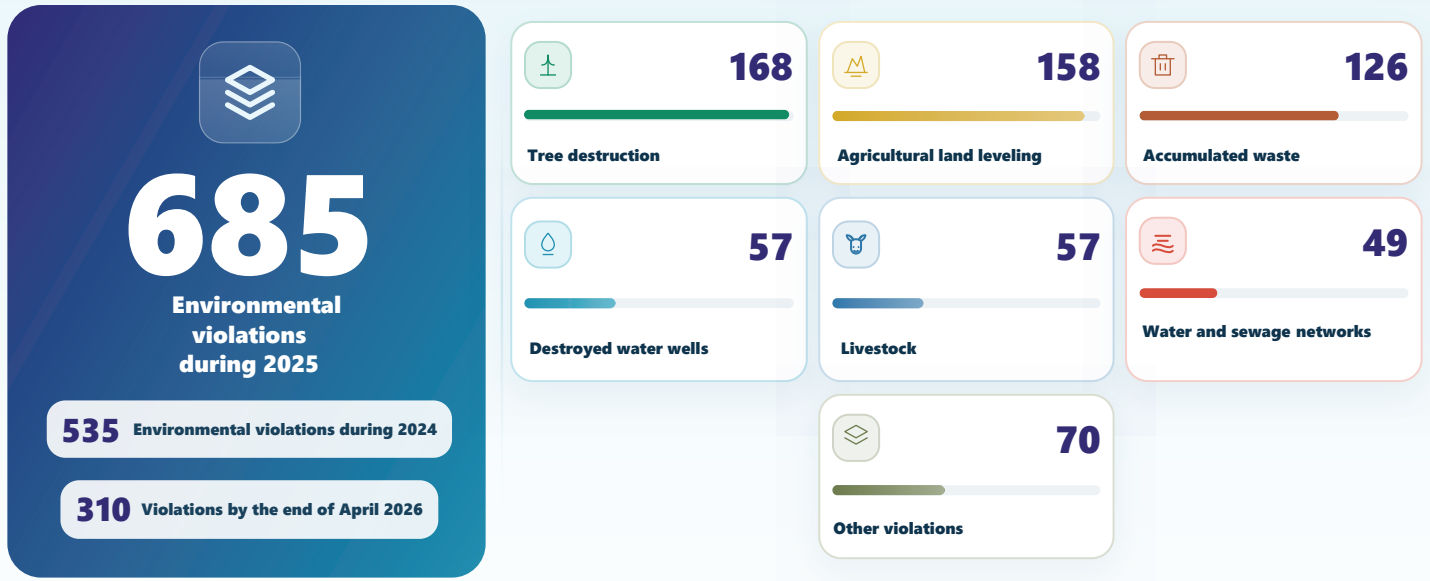

79%

Escalating Israeli environmental violations threaten ecosystems in the West Bank

Number of Israeli environmental violations in the West Bank by type during 2025

Climate action in Palestine is not merely an environmental issue; it is a matter of resilience, steadfastness, and the right to Life, resources, and sustainable development

➤ Despite the catastrophic state of the Palestinian environment, there are still signs of hope and resilience, highlighted by the following:
