## **Acknowledgement**

**The Palestinian Central Bureau of Statistics (PCBS) extends its deep appreciations to all Palestinian *families who contributed to the success of collecting the survey data and to all workers* in the survey for being well dedicated in performing their duties.**

**The survey of the Palestinian Expenditure and Consumption has been planned and conducted by a technical team from PCBS and with joint funding by the Palestinian National Authority (PNA) and the Core Funding Group (CFG) for the year 2010 represented by the Representative Office of Norway to PNA and the Swiss Development and Cooperation Agency (SDC).**

**Moreover, PCBS very much appreciates the distinctive efforts of the Core Funding Group (CFG) for their valuable contribution to funding the project.**

## Work Team

- **Technical Committee**

Abdelminem Jalboush

Head of the Committee

Rania Abu Gaboush

Mamoun Alnajar

Fayez Alghadban

Abdulla Azam

Anas Nabil

- **Report Preparation**

Abdelminem Jalboush

Qais Hasiba

Fida' Twam

- **Maps Design**

Reham Dar Ali

- **Dissemination Standard**

Hanan Janajreh

- **Preliminary Review**

Fida' Twam

Yousef Falah

Jawad Al Saleh

- **Final Review**

Mahmoud Jaradat

- **Overall Supervision**

Ola Awad

PCBS President

## Notes for Users

- Negligible differences may be noted between summations of indicators due to the rounding of numbers.
- The average household size should be taken into account in comparing indicators.
- The Symbol (-) in the tables means that there is insufficient observations in the cell.
- NIS, JD and US\$ were used in recording the value of commodities and services. The average exchange rate during the survey period was as follows:

<b>Exchange Rate of New Israeli Shekel by Month 2010</b>		
<b>Month</b>	<b>Jordanian Dinar (JD)</b>	<b>US Dollar (US\$)</b>
January	5.22	3.74
February	5.34	3.78
March	5.20	3.69
April	5.20	3.69
May	5.44	3.86
June	5.45	3.86
July	5.37	3.81
August	5.35	3.80
September	5.16	3.66
October	5.10	3.62
November	5.14	3.64
December	5.06	3.57

## Table of Contents

## **Introduction**

PCBS conducted the eleventh Palestinian Expenditure and Consumption Survey (PECS - 2010) between January 15, 2010 and January 14, 2011.

The objectives of this survey are to provide high quality data on the total consumption level and structure of Palestinian households, whilst supplying crucial support to other statistical programs of PCBS, such as the Consumer Price Index, National Accounts, balance of payments statistics, in addition to social studies on living standards and poverty nutrition, particularly amongst vulnerable groups.

This report presents the final results for the eleventh round of the survey, January 2010 through January 2011.

The report is divided into three chapters: chapter one presents the main findings of the survey while chapter two discusses the quality and methodology of fieldwork in terms of questionnaire, sample design, fieldwork operations, and coverage, in addition to data processing and tabulation. Finally, chapter three explains the main concepts and definitions used in the report with brief descriptions.

PCBS is pleased to issue the eleventh bulletin of Expenditure and Consumption Survey of Palestinian households. We hope that we have contributed in the rationalization of development decision. The data of this survey is a new point in the PECS time series data which is important from the perspective of economics and social context on level of living standards in the Palestinian Territory.

**September, 2011**

**Ola Awad  
PCBS President**

## Chapter One

### Main Findings

#### 1.1 Average Monthly Expenditure Per Capita 2010

Data revealed that monthly expenditure per capita was JD 147.3, (JD 174.0 in the West Bank and JD 102.9 in Gaza Strip). Monthly expenditure per capita on food groups was JD 53.6 (JD 59.4 in the West Bank and JD 43.9 in Gaza Strip), while average monthly expenditure per capita on non-food groups was JD 81.5 (JD 100.6 in the West Bank and JD 49.5 in Gaza Strip). The share of total expenditure on food was 36.4% (34.1% in the West Bank and 42.6% in Gaza Strip).

Average monthly expenditure per capita was 15.2% on transport and communication, the second largest expenditure, and 11.8% on other goods: “zakat, taxes, presents, and other groups”. Average monthly expenditure per capita on housing was 8.7%.

Expenditure on clothing and shoes was JD 9.3, while JD 8.2 of average monthly expenditure was on housing supplies and JD 5.8 on medical care.

Monthly expenditure per capita on tobacco and cigarettes was higher than that on education, personal care, and recreation. Expenditure on tobacco and cigarettes was JD 6.4, while average monthly expenditure on education, personal care, and recreation was JD 5.2, JD 4.1, and JD 2.2 respectively.

Data differ according to the type of locality: average monthly expenditure per capita in urban localities was JD 152.0 compared to JD 144.3 and JD 117.0 in rural areas and camps respectively.

#### 1.2 Average Monthly Consumption Per Capita 2010

Average monthly consumption per capita in the Palestinian Territory was JD 155.2, with an average of JD 183.1 in the West Bank compared to JD 108.7 in Gaza Strip. Monthly consumption of food per capita was JD 55.3 (JD 61.8 in the West Bank and JD 44.4 in Gaza Strip). Monthly consumption per capita of non-food items was JD 99.9 (JD 121.3 in the West Bank and JD 64.4 in Gaza Strip).

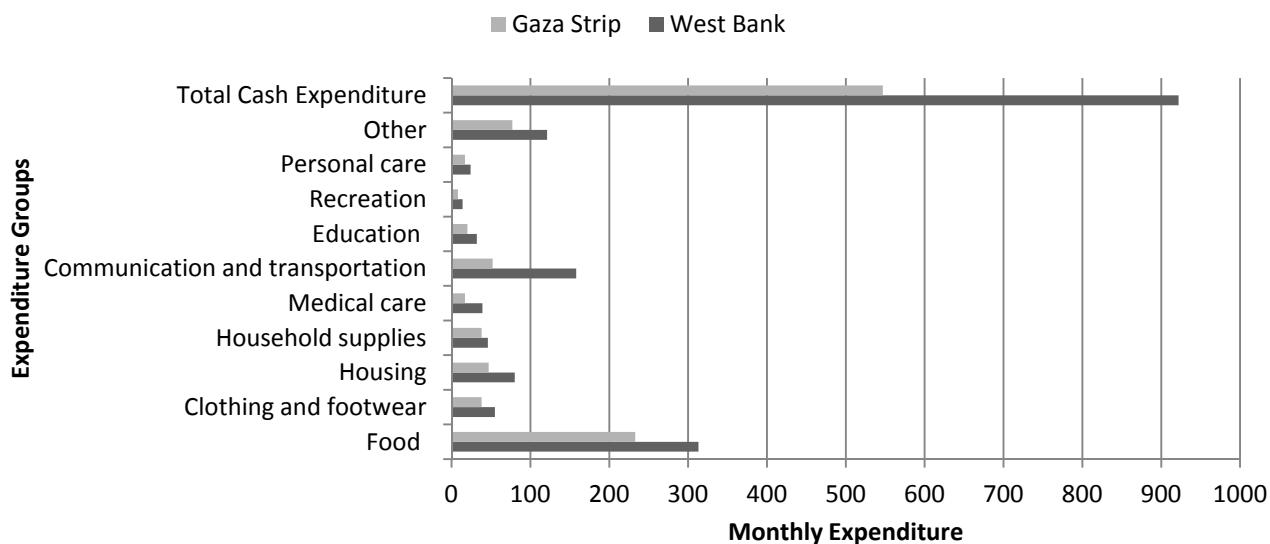

The highest share of total consumption was made up of food with 35.6%: 33.8% in the West Bank and 40.8% in Gaza Strip. The share of food in total consumption reflects the standard of living, according to Engle's theory of poverty. If the share of food increases, standards of living and recreation per capita decrease since all the resources are spent on food. The data shows that the share of food in the West Bank is less than that in the Gaza Strip and therefore standards of living in the West Bank are higher than in Gaza Strip.

**Average Monthly Expenditure Per Capita in New Israeli Shekels (NIS) by Commodity in West Bank and Gaza Strip, 2005-2010**

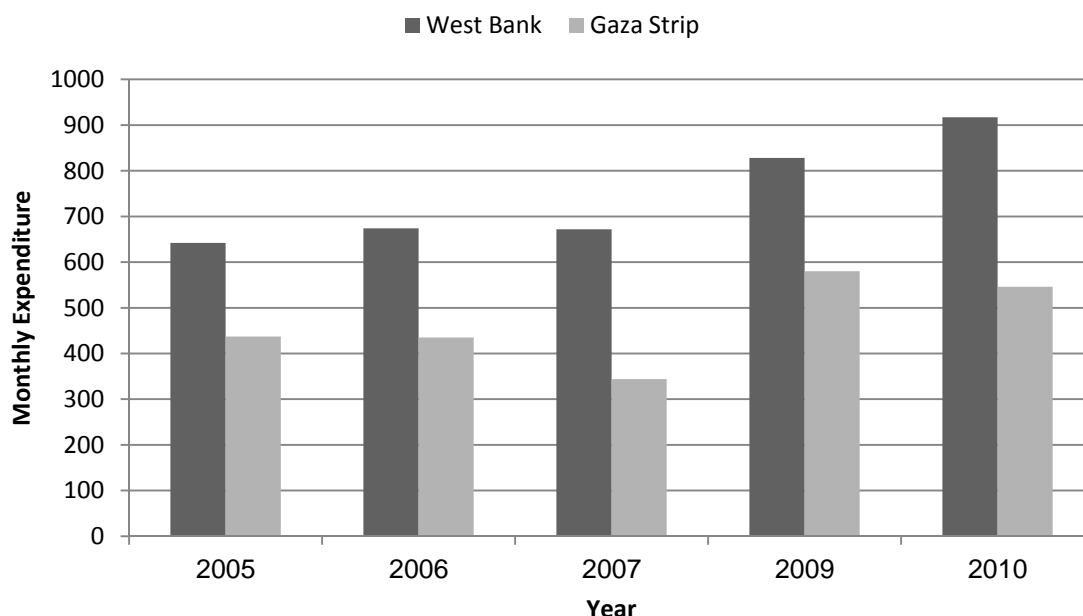

Cash expenditure on commodities and services	West Bank					Gaza Strip				
	2005	2006	2007	2009	2010	2005	2006	2007	2009	2010

**Average Monthly Expenditure Per Capita in New Israeli Shekels (NIS) in West Bank and Gaza Strip by Commodity and Service Group, 2010**

### Total Average Monthly Expenditure Per Capita in New Israeli Shekels (NIS) in West Bank and Gaza Strip, 2005-2010

#### 1.3 Average Monthly Household Expenditure 2010

The monthly household expenditure in the Palestinian Territory (average household consisting of 6.0 persons) between January 2010 and January 2011 was JD 886.9. Expenditure of household in details were as follows: JD 322.4 on food, JD 134.9 on transport and communication, JD 76.7 on housing, JD 55.9 on clothing, JD 49.1 on furniture and household supplies, JD 35.1 on medical care, JD 38.7 on tobacco and cigarettes, JD 31.4 on education, JD 24.4 on personal care, and JD 13.4 on recreation.

The monthly household expenditure in the West Bank (average household consisting of 5.7 persons) was JD 993.8. Expenditure of household in details were as follows: JD 339.2 on food, JD 171.2 on transport and communication, JD 86.4 on housing, JD 60.0 on clothing, JD 50.4 on furniture and household supplies, JD 42.3 on medical care, JD 50.6 on tobacco and cigarettes, JD 35.0 on education, JD 26.2 on personal care and needs, and JD 14.9 on recreation.

The monthly household expenditure in Gaza Strip (average household consisting of 6.6 persons) was JD 680.7. Expenditure of household in details were as follows: JD 290.1 on food, JD 65.0 on transport and communication, JD 58.2 on housing, JD 47.8 on clothing, JD 46.8 on furniture and household supplies, JD 21.2 on medical care, JD 15.8 on tobacco and cigarettes, JD 24.5 on education, JD 20.9 on personal care and needs, and JD 10.6 on recreation.

#### 1.4 Average Monthly Household Consumption 2010

The average monthly household consumption in the Palestinian Territory (household consisting of 6.0 persons) between January 2010 and January 2011 was JD 934.1. In the West Bank, (household consisting of 5.7 persons) it averaged JD 1045.7 compared to JD 719.0 in the Gaza Strip ((household consisting of 6.6 persons).

The average monthly household consumption in the Palestinian Territory was JD 51.0 on bread and cereals, JD 82.3 on meat and poultry, JD 7.5 on fish and sea products, JD 25.4 on dairy products and eggs, JD 13.6 on oil and fat, JD 25.6 on fruit and nuts, JD 43.1 on vegetables, legumes and tubers, JD 17.5 on sugar and confectionery, JD 15.1 on non-alcoholic beverages, JD 17.0 on other food, JD 24.3 on take-away food and meals in restaurants, and JD 10.2 on home-produced food in kind, consumed or given away.

## **1.5 Average Monthly Quantity Consumption of Food Products**

The findings in this section are based on quantities recorded by households and reviewed by the interviewer. The data copying procedures were checked from the household recordings to the questionnaire and validation rules were applied to ensure internal consistency. Mistakes were corrected to ensure compliance with the standards in place. In addition to the validation rules, other rules of data verification were applied to check the logic of quantities and prices.

### **A. Average Monthly Quantity Consumption Per Capita of Food Products in the Palestinian Territory:**

- The average monthly quantity consumption per capita of cereal products and bread was 10.0 kg as follows: 1.7 kg of rice, 4.2 kg of flour, 0.1 kg of wheat, and 2.9 kg of bread.
- The average monthly quantity consumption per capita of meat and chicken was 3.9 kg as follows: 0.2 kg of mutton (sheep and goat meat), 0.5 kg of beef, and 2.7 kg of chicken.
- The average monthly quantity consumption per capita of fish and seafood products was 0.4 kg.
- The average monthly quantity consumption per capita of milk was 0.8 litres, 0.9 litres of yogurt, and 0.2 kg of different types of cheese.
- The average monthly quantity consumption per capita of eggs was 0.6 kg.
- The average monthly quantity consumption per capita of olive oil and other oils was 0.3 litres and 0.8 litres respectively. The average monthly quantity consumption per capita of various types of fats (animal and plant) was 0.04 kg.
- The average monthly quantity consumption per capita of fresh fruit was 5.3 kg.
- The average monthly quantity consumption per capita of crackers (mixed nuts) was 0.2 kg.
- The average monthly quantity consumption per capita of fresh vegetables was 8.0 kg.
- The average monthly quantity consumption per capita of tubers was 1.8 kg.
- The average monthly quantity consumption per capita of sugar was 1.5 kg.
- The average monthly quantity consumption per capita of salt was 0.4 kg.

### **B. Average Monthly Quantity Consumption Per Capita of Food Products in the West Bank:**

- The average monthly quantity consumption per capita of cereal products and bread was 9.1 kg as follows: 1.9 kg of rice, 2.4 kg of flour, 0.1 kg of wheat, and 3.5 kg of bread.
- The average monthly quantity consumption per capita of meat and chicken was 4.1 kg as follows: 0.3 kg of mutton (sheep and goat meat), 0.5 kg of beef, and 2.9 kg of chicken.
- The average monthly quantity consumption per capita of fish and seafood products was 0.3 kg.
- The average monthly quantity consumption per capita of milk was 0.9 litres, 1.1 litres of yogurt, and 0.3 kg of different types of cheese.
- The average monthly quantity consumption per capita of eggs was 0.6 kg.
- The average monthly quantity consumption per capita of olive oil and other oils was 0.4 litres and 0.6 litres respectively. The average monthly quantity consumption per household of various types of fats (animal and plant) was 0.04 kg.
- The average monthly quantity consumption per capita of fresh fruit was 5.3 kg.
- The average monthly quantity consumption per capita of crackers (mixed nuts) was 0.2 kg.
- The average monthly quantity consumption per capita of fresh vegetables was 7.4 kg.
- The average monthly quantity consumption per capita of tubers was 1.7 kg.
- The average monthly quantity consumption per capita of sugar was 1.2 kg
- The average monthly quantity consumption per capita of salt was 0.4 kg.

**C. Average Monthly Quantity Consumption Per Capita of Food Products in Gaza Strip:**

- The average monthly quantity consumption per capita of cereal products and bread was 11.9 kg as follows: 1.1 kg of rice, 7.7 kg of flour, 0.1 kg of wheat, and 1.8 kg of bread.
- The average monthly quantity consumption per capita of meat and chicken was 3.5 kg as follows: 0.1 kg of mutton (sheep and goat meat), 0.7 kg of beef, and 2.3 kg of chicken.
- The average monthly quantity consumption per capita of fish and seafood products was 0.6 kg.
- The average monthly quantity consumption per capita of milk was 0.4 litres, 0.6 litres of yogurt and 0.2 kg of different types of cheese.
- The average monthly quantity consumption per capita of eggs was 0.7 kg.
- The average monthly quantity consumption per capita of olive oil and other oils was 0.2 litre and 1.0 litres respectively. The average monthly quantity consumption per household of various types of fats (animal and plant) was 0.04 kg.
- The average monthly quantity consumption per capita of fresh fruits was 5.4 kg.
- The average monthly quantity consumption per capita of crackers (mixed nuts) was 0.2 kg.
- The average monthly quantity consumption per capita of fresh vegetables was 9.2 kg.
- The average monthly quantity consumption per capita of tubers was 2.2 kg.
- The average monthly quantity consumption per capita of sugar was 2.1 kg.
- The average monthly quantity consumption per capita of salt was 0.5 kg.

## Chapter Two

### Methodology and Data Quality

#### 2.1 Introduction

The PECS questionnaire was designed according to UN/ILO recommendations for Household Budget Surveys as conducted in the majority of countries. These recommendations follow the concept of the National Accounts System 1993 (SNA, 93) and other changes based on the COICOP system pertinent to the classification of household/personal consumption commonly used in consumption surveys internationally.

The methodology of the survey is summarized as follows:

- The sample is a stratified cluster systematic random sample with two stages, and 12 sub-samples were used: one sub-sample for each month.
- The duration of the survey was 12 months. The design of the survey took into consideration seasonal changes in consumption as regards expenditure on fruit, vegetables and clothes.
- Each household was provided with a record book (diary) to record daily expenditures. A female fieldworker visited the household 8-10 times to ensure the recording of household consumption in the diary according to the prescribed procedures.
- The recording period for each household was restricted to one month. Households with longer recording periods were given less variance in expenditure and consumption patterns. A disadvantage of a longer recording period is that households get bored or forget to fill in the diary. The UN/ILO recommendations call for a recording period of three to four weeks. PCBS selected a four-week recording period to cover household expenditures on goods and services that are repeated during the month.
- Different time references were adopted for the items of household expenditure and consumption. Daily expenditure on food and transportation was given a one-month reference period. Durable goods and educational fees were given a 12-month reference period, excluding personal transportation which was extended to the previous three years. One month and one year reference periods were used for income.

#### 2.2 The Questionnaire

The questionnaire was consisted of two main parts:

##### **First: Survey questionnaire**

First part of the questionnaire was completed during the visit at the beginning of the month, while the other part was completed at the end of the month. The questionnaire included:

**Control sheet:** Includes household identification data, date of visit, data on fieldwork and the data processing team, and a summary of the household members by gender.

**Household roster:** Includes demographic, social, and economic characteristics of the household members.

**Source of income and consumer durable goods schedule:** Includes list of main goods like washing machines, refrigerator, TV sets, and sources of income generation like ownership of farmland or animals stocks.

**Housing characteristics:** Includes data like the type of housing unit, number of rooms, value of rent, and connection of housing unit to basic services like water, electricity, and sewage. In

addition, data in this section includes the source of energy used for cooking and heating, distance of the housing unit from public transportation, education, and health centers.

**Monthly and annual income:** Data pertinent to the household income from different sources was collected at the end of the registration period.

### **Second: List of goods**

The classification of the list of goods is based on the recommendation of the United Nations for the SNA under the name Classification of Personal Consumption by Purpose. The list includes 50 groups of expenditure and consumption, with each given a sequence number based on its importance to the household, starting with food goods, clothing groups, housing, medical treatment, transportation and communication, and lastly, durable goods. Each group consists of important goods. There were 667 goods and services in total in all of the groups. Groups from 1-21 include goods pertinent to food, drinks, and cigarettes. Group 22 includes goods that are home-produced and consumed by the household. Groups 23-45 include all items except food, drinks, and cigarettes. Groups 50-55 include durable goods. The data are collected based on different reference periods to represent expenditure during the entire year, except for vehicles where data is collected for the last three years.

## **2.3 Registration Form**

The recording form includes instructions and examples on how to record consumption and expenditure items. The form includes columns:

- Monetary: If the good is purchased or in kind: if the item is self-produced.
- Title of the service or the good
- Unit of measurement (kilogram, litre, number)
- Quantity
- Value

The pages of the recording form are colored differently for each week of the month. The footer for each page includes remarks that encourage households to participate in the survey. The following are instructions that illustrate the nature of the items that should be recorded:

- Monetary expenditure during purchases
- Purchases based on debts
- Monetary gifts once presented
- Interest on pay
- Self-produced food and goods once consumed
- Food and merchandise from a commercial project once consumed
- Merchandise once received as a wage or part of a wage from the employer.

## **2.4 Sampling and Sampling Frame**

### **2.4.1 Target Population**

The target population consists of all Palestinian households who are normally resident in the Palestinian Territory during 2010.

### **2.4.2 Sampling Frame**

The sampling frame consists of all areas enumerated in 2007. Each enumeration area consists of buildings and housing units comprising an average of around 124 households. These enumeration areas are used as primary sampling units (PSUs) in the first stage of the sampling selection.

### 2.4.3 Sample Size

The estimated sample size for the Expenditure and Consumption Survey 2010 is 4,608 households for the whole year. The non-response rate is estimated at around 20% of the total sample.

### 2.4.4 Sample Design

The sample is a two-stage stratified cluster sample:

**First stage:** selection of a systematic random sample of 192 enumeration areas.

**Second stage:** selection of a systematic random sample of 24 households from each enumeration area selected in the first stage.

**Note:** in Jerusalem Governorate (J1), 13 enumeration areas were selected. In the second stage, a group of households from each enumeration area were chosen using the 2007 census method of delineation and enumeration to obtain 24 responsive households. This ensures household response is the maximum to comply with the percentage of non-response as set in the sample design.

Enumeration areas were distributed over twelve months and the sample for each quarter covers sample strata (governorate, locality type).

#### Sample strata:

The population was divided by:

- 1- Governorate
- 2- Locality type (urban, rural, refugee camp)

### 2.5 Weight Calculation

The weight of statistical units (sampling units) in the sample is defined as the mathematical inverse of the selection probability where the sample of the survey is a two-stage stratified cluster sample. Thus, the weights are calculated for each stage and the household weight is the multiplication of the two weights.

#### First stage weight:

The sample of enumeration areas is selected and the weight is called enumeration areas weight (the sampling unit is enumeration areas).

The weight for enumeration areas from stratum  $h$  by the design of sample is calculated by dividing the # of enumeration areas in stratum  $h$  into the sample size of enumeration areas in stratum  $h$  by the following equation 1:

1. 
$$W_{ih} = \frac{M_h}{n_h}$$

Where

- $h$  The code of stratum  $h$  by governorate and locality type
- $W_{ih}$  The weight of enumeration area  $i$  in stratum  $h$
- $M_h$  The # of enumeration areas in the stratum  $h$  from 2007 frame
- $n_h$

The sample size of enumeration areas in stratum h

**Second stage weight:**

The sample of households is selected and the weight is called household weight (the sampling unit is the household).

Household weight is calculated from the enumeration area (cluster)  $k$  by dividing the number of households in each cluster with the sample size of households within the cluster  $k$ , using the following formula equation 2 :

$$2. \quad W_{ik} = \frac{M_k}{n_k}$$

**Where**

- $k$  Cluster code for the household  $i$
- $W_{ik}$  Weight of household  $i$  in the cluster  $k$
- $M_k$  Number of households in the cluster  $k$  from the population census in 2007
- $n_k$  The sample households from cluster  $k$

The primary weight of households before modification is the multiplication of the weights of the first and second stages.

Then we adjust the primary weights for the households to compensate for the non-response of households by calculating the adjustment factor for household weights by adjustment levels (governorate and locality type) by using household projections according to 2009 adjustment levels by the following equation 3 :

$$3. \quad f_h = \frac{m_h}{\sum_{i=1}^{nh} w_i}$$

- $f_h$  The adjustment factor for the adjustment levels h
- $m_h$  The # of households in adjustment level h from household projections in 2009
- $\sum_{i=1}^{nh} w_i$  The sum of the primary households weights in adjustment level h

Then the final weight for the households ( FHW) is a multiplication of the adjustment factor (fh) by the primary weight for the household by the following equation 4:

$$4. \quad FHW = w_h * f_h$$

## **2.6 Field Operations**

Four teams of female interviewers, three in the West Bank and one in the Gaza Strip, conducted data collection. Each team consisted of a supervisor and 10-20 female interviewers.

Fieldwork teams were distributed according to their place of residence. All field staff received a training session combining general theoretical and practical components.

## **2.7 Data Processing**

Both data entry and tabulation were performed using the ACCESS and SPSS software programs. Data entry was organized in six files corresponding to the main parts of the questionnaire. A data entry template was designed to reflect an exact image of the questionnaire and included various electronic checks: logical check, range checks, consistency checks and cross-validation. Complete manual inspection of results was performed after data entry and questionnaires containing field-related errors were corrected.

## **2.8 Accuracy of the Data**

### **2.8.1 Statistical Errors**

Since the study is based on a sample survey and not on a complete enumeration, the data are subject to sampling errors as well as non-sampling errors.

Data in this survey can be affected by statistical errors due to the use of the sample. Therefore, certain differences are expected in comparison with the real values obtained through censuses. Variations were calculated for the most important indicators and demonstrate the ability to disseminate results at regional level. However, the dissemination of data at governorate level indicates values of certain averages of expenditure with high variations, as explained in the statistical tables.

### **2.8.2 Non-Statistical Errors**

Non-statistical errors in general refer to the nature of PECS, which can be summarized as follows:

- Many households considered the specific details of the survey as interference in their personal life.
- Israeli impact on the Palestinian Territory (curfew and closure).
- Some households thought the survey is related to social assistance or to taxes.
- Some households focus on high quantity expenditures and neglect small quantity expenditures.
- Hesitation of households to record some goods, like beverages.
- Hesitation of households in the Jerusalem area to provide data because they were afraid of Israeli action against them if they participated in a Palestinian survey or activity. The overall refusal rate was almost 19.5% after the first visit, which was higher than last year when it was 8.7%, although the sample in Jerusalem comprised 24 households from each of the 13 enumeration area in the (J1) sample.

The survey encountered cases of non-response where the household was not present at home during the fieldwork visit, or the housing unit was vacant, or the household refused to participate.

The total non-response rate was 17.9%. This is relatively low compared to similar types of surveys in other countries and compared to 20.43% in the last (PECS) survey in 2009. The refusal rate was 9.2% and the percentage of non-completed questionnaires was 12%, both lower last year.

## 2.9 Response Rates

The survey sample consisted of 4,767 households, which includes 4,608 households of the original sample plus 159 households as an additional sample. A total of 3,757 households completed the interview: 2,575 households from the West Bank and 1,182 households in the Gaza Strip. Weights were modified to account for the non-response rate. The response rate in the West Bank was 82.4% and in Gaza Strip it was 81.6%.

Total sample size: 4,767 Households			
Household completed	3,757	Refused to cooperate	437
Traveling households	88	Vacant housing unit	168
Unit does not exist	24	No available information	15
No one at home	241	Other	37

### Response and non-response formulas:

#### Response and non-response rates

$$\text{Percentage of over-coverage errors} = \frac{\text{Total cases of over-coverage}}{\text{Number of cases in original sample}} * 100\% = 4\%$$

$$\text{Non-response rate} = \frac{\text{Total cases of non-response}}{\text{Net sample size}} * 100\% = 17.9\%$$

$$\text{Net sample} = \text{Original sample} - \text{cases of over-coverage}$$

$$\text{Response rate} = 100\% - \text{non-response rate} = 82.1\%$$

Treatment of non-response cases using adjustment groups:

$$fg = \frac{\sum_{ng} wi - \sum_{o.c} wi}{\sum_{rg} wi}$$

Where

$$\sum_{ng} wi \text{ Total weights in group } g$$

$$\sum_{o.cg} wi \text{ Total weights considered over-coverage}$$

$$\sum_{rg} wi \text{ Total weights responded in the survey}$$

Each unit is given the value  $fg$  to the group that belongs to it, then  $w'i$  is calculated using the following formula:

$$w' gi = wi * fgi$$

## 2.10 Data Comparison

A comparison between survey data and previous surveys occurred at macro level and the tables of comparisons are presented in the main findings chapter.

## 2.11 Quality Control

The impact of errors on data quality was reduced to a minimum due to the high efficiency and outstanding selection, training, and performance of the fieldworkers.

**Procedures adopted during the fieldwork of the survey were considered a necessity to ensure the collection of accurate data, notably:**

- Develop schedules to conduct field visits to households during survey fieldwork. The objectives of the visits and the data collected on each visit were predetermined.
- Fieldwork editing rules were applied during the data collection to ensure corrections were implemented before the end of fieldwork activities
- Fieldworkers were instructed to provide details in cases of extreme expenditure or consumption by the household.
- Questions on income were postponed until the final visit at the end of the month
- Validation rules were embedded in the data processing systems, along with procedures to verify data entry and data editing.

## 2.12 Technical Notes

There are important technical notes that should be taken into consideration when reviewing this report, which are as follows:

- Re-interviewing was conducted on a sub-sample of the main sample and the result of the identification was excellent with regard to most of the main indicators.
- Increase in the sample size compared with previous years to allow dissemination at a more detailed level.
- For comparison purposes, it is important to use indicators on persons.
- In comparing data with previous years, it is important to take into consideration the declining exchange rate of major currencies (US dollar, Jordanian Dinar) against the NIS. A table of exchange rates is included in this report.

## Chapter Three

### Concepts and Definitions

**Head of Household:**

The person who usually lives with the household and is recognized as the head of household by its other members. Often he/she is the main decision maker and is responsible for financial support and welfare of the household.

**Household Expenditure:**

This refers to the amount of cash spent on the purchase of goods and services for living purposes, and the value of goods and service payments, or part of payments, received from an employer, and cash expenditure spent as taxes (non-commercial or non-industrial), gifts, contributions, interest on debts, and other non-consumption items.

**Household Consumption:**

This refers to the amount of cash spent on the purchase of goods and services for living purposes, and the value of goods and service payments, or part of payments, received from an employer, and own-produced goods and food, including consumed quantities during the recording period, and imputed rent.

**Recording Period:**

This refers to the temporal point during which data on household expenditure and consumption are recorded. It includes one month for record keeping and twelve months for the final interview on durable goods.

**Dependency Ratio:**

This refers to the ratio of the elderly (those 65 years and over) plus the young (those under 15 year of age) to the population of working age (between 15-64 years of age).

**Standard of Living:**

This refers to food consumption divided by total consumption. This indicator is based on the following assumption: the standard of living is identified by the proportion of consumption on food out of total consumption (Engel's Law of Poverty), since if the share of food increases, the shares of health, education, and housing decrease. It is distributed into three categories: 1. Better-off: where food consumption to total consumption is less than 30%; 2. Middle category: where food consumption to total consumption is between 30-44%; 3. Worse-off: where food consumption to total consumption is between 45-100%.

**Other Non- consumption Expenditures:**

Interest on loans, fees and taxes.

**Other Non-food Consumption Expenditures:**

Financial and legal services, advertisement fees, copy services, translation and printing, writing and drawing equipment, tickets for traveling abroad, jewelry, watches, precious stones, etc.

**Income:**

Cash or in-kind revenues to an individual or household within a period of time: could be a week, a month, or a year.

**Main Source of Income:**

The most consistent and regular income. The sources of income are:

- Wages and salaries.
- Net income for employers or self-employed.
- Net property income.
- Net current transfers.

**\*Lorenz Curve:**

This is usually used to measure inequalities in the distribution of consumption or income. To plot the curve, the units are first either arrayed individually or grouped in class intervals according to the appropriate independent variety. Then the cumulative percentage of the number of areas (Y) is plotted against the cumulative percentage of population (X). For comparison, a diagonal line is drawn at 45 degrees to show the condition of equal distribution. The Gini concentration ratio measures the proportion of the total area under the diagonal that lies in the area between the diagonal and the Lorenz Curve, and its values between 0 and 1, where zero reflects perfect situation in distribution and 1 reflects the worst situation in distribution.
