grant from the European Commission**

Acknowledgment

Many people have made the survey project on which this report is based possible, amounting to a cast of thousands, because, without the cooperation of respondents and interviewers, we would have no data. The cooperation and understanding of women and households selected in the survey sample during fieldwork was truly remarkable. We wish to acknowledge the contributions of every one of them to the survey project. We are greatly indebted to many staff members at the PCBS for their distinguished or otherwise valuable contributions to the report and the study.

This report is prepared by Ayman Sawalha, Mohammad Duraidi, Inaya Haj Dawoud, Husam Salameh and Marwan Khawaja.

The successful implementation of this project would not have been possible without the generous financial assistance provided by the European Commission. We wish to thank the European Commission and its representatives in Jerusalem.

Preface

The PCBS is responsible for making reliable demographic and social data available to Palestinian officials and members of the public, including researchers. Among the duties of the Bureau is the provision and analysis of demographic data pertaining to the Palestinian population both here and elsewhere. A great deal of effort is being devoted at PCBS to institute a program on population statistics that provides such data. There has been no Census in the Remaining West Bank and Gaza Strip since 1967. The available demographic data are, therefore, incomplete and lack credibility when checked for consistency as shown in a recent PCBS publication. In order to fulfill its responsibilities with regard to demographic information, the PCBS has conducted a fairly large demographic survey in the West Bank and Gaza Strip during April-July 1995. This report presents detailed results on the marital characteristics of the Palestinian population from this study.

Initial Planning for this project began in early 1993, with backing from the PLO at that time. The project has as its main objective the provision of basic demographic indicators at both the national and district levels. Other purposes of the project include: Preparation of a master sample frame to be used for drawing household samples until the implementation of the population census; contribution to the institution building of PCBS, especially in the management of field operations; and testing instruments, procedures and instructions for use in planning for the population and housing census.

This is an important study because it provides detailed demographic data on Palestinians residing in the West Bank and Gaza Strip according to international recommendations. Specifically, the survey was designed to furnish, among other things, basic information on population structure, fertility, mortality, migration, marriage, education, and housing conditions, at both the national and district levels. This survey is, therefore, the first of its kind in the Occupied Territory, and should provide concerned parties with data useful for designing public policies, and for undertaking research.

April, 1998

Dr. Hassan Abu- Libdeh
President

Summary

1. Introduction

Reliable and current population statistics are essential for policy programming and for social and economic planning at all levels. There has been no census in the West Bank (excluding Jerusalem) and Gaza Strip since 1967. As a result, existing demographic data on the Occupied Palestinian Territory (OPT) remain incomplete and imprecise.

To improve the situation, the PCBS has decided to undertake a fairly large demographic survey. The main purpose of this survey is to provide basic demographic estimates at both the national and district levels, filling important gaps in existing statistics and reducing uncertainties surrounding the utility of available data. Specifically, the survey provides detailed data on the following topics:

- Population structure
- Female fertility
- Fertility preference
- Infant and child mortality
- Maternal and adult mortality
- Internal and international migration
- Marriage
- Family and household composition
- Educational attainment
- Housing conditions.

This report contains detailed marriage data for the Palestinian population in the West bank and Gaza strip. The estimates are based on preliminary results from the Palestinian Demographic Survey, which was carried out from April 29, 1995 to July 23, 1995 by the Palestinian Central Bureau of Statistics in collaboration with the Institute for Applied Social Science (FAFO).

This report is the third one in the Demographic Survey Topical Report Series (DSRS-TR). In addition to the data and main results, the report provides a brief description of the survey methodology. A more detailed description of the technical terms and procedures used in the survey is provided in the report, *The Demographic Survey in the West Bank and Gaza Strip: Final Report* (PCBS 1997).

Related and Forthcoming Report

National level data on marital characteristics from the Demographic Survey were published in the Report, *The Demographic Survey in the West Bank and Gaza Strip: Final Report* (PCBS 1997). District-level data on marriage from the survey were provided in the District Report Series.

This report is the third one in the Demographic Survey Topical Report Series (DSRS-TR). It contains final result from the survey at both the national and subnational (West Bank and Gaza Strip) levels. The results provided in this report cover the West Bank (including Jerusalem) and Gaza Strip population, and are therefore the most recent updated estimates compared to their counterparts in the previous reports.

The PCBS will be pleased to provide special-purpose tabulation on various characteristics, not published here, upon request.

2. Definitions and Explanations

| | |
|---------------------------|--|
| Age | The completed age in years of the person enumerated, which is the difference between the date of birth and the survey reference period. The exact age is the time elapsed between the day of birth and a given day, including parts of a year. |
| Age at Marriage | The age of the individual in years at the time of his/her actual marriage. |
| De jure Population | A population enumerated as the basis of usual residence, excluding temporary visitors and including residents temporarily absent. All persons who have been temporarily absent for up to 1 year are considered usual residents in this survey. |
| Live Birth | A birth is considered live birth if the baby born has shouted, cried, or shown any characteristics of life at birth. |
| Median Age | The age which divides a population into two numerically equal groups: that is, half of the people are younger than this age and half are older. |
| Marital Status | The status of those 14 years old and over in terms of marriage traditions and laws in the country. It might be one of the following: |
| Divorced | The individual 14 years old and over who was married but his/her marriage was revoked by a legally registered divorce, and he/she did not marry again. |
| Married | The individual 14 years old and over who is actually married according to the existing norms regardless of |

whether he/she is living with a spouse at the time of the interview or not.

| | |
|---------------------------------------|--|
| Single | The individual 14 years old and over who did not actually marry according to the existing norms and traditions |
| Widower | The individual 14 years old and over who was married, but his/her marriage was revoked because of the death of the partner, and he/she did not marry again. |
| Separated | The individual 14 years old and over who was married, but his/her marriage was revoked for some reason without any legal or official registration, and he/she did not marry again. |
| Marriage Duration | The duration between the date of the actual marriage and the survey reference date, calculated in years. |
| Place of Residence | Place of residence was divided into cities, villages, and refugee camps. All localities with municipalities are considered cities; population outside municipal boundaries and camps are considered village population, villages in Gaza Strip included in camp. |
| Reference Date | The date referred to in calculating the vital rates and ages. In this survey, it is 30/4/1995. |
| Singulate Mean Age at Marriage | The average age at which the population (by sex) first Marries. It is calculated in a manner which avoids the downward bias introduced one simply averages the age of marriage that can be recorded from those who have already married in the population. |

3. Main Findings

This chapter includes a brief summary of the main marriage indicators in the Palestinian society based on data derived from the demographic survey. These indicators are summarized as follows:

3.1 Marital Status

The percentage of married individuals aged 14 years old and over in the Palestinian Territories amounted to 56.2% for males and 59.1% for females. In the West Bank, the percentage amounted to 54.5% and 57.3% for males and females, respectively. Moreover, it amounted to 60.0% and 63.1% for males and females, respectively, in Gaza Strip. The percentages of married individuals among those aged 14 years old and over in the Palestinian villages were 54.9 % (for males) and 59.4% (for females) whereas it amounted to 58.7 % (for males) and 60.0 % (for females) in the refugee camps.

3.2 Age at First Marriage

The median age at first marriage for males in the Palestinian Territories was 23 years. Whereas the median age prevailing in the West Bank is the same as this figure, the median age prevailing in Gaza Strip was 22 years. The median age at first marriage for females in the West Bank was equal to that of females in Gaza Strip, namely 18 years. The median age at first marriage for males holding higher academic degrees was 27 years. However, for males who did not complete the elementary scholastic stage, the median age at first marriage was 22 years. As for females holding higher academic degrees as well as females that did not complete the elementary scholastic stage, the median ages at first marriage were 24 years and 18 years, respectively.

3.3 Singulate Mean Age at Marriage

The singulate mean age at marriage in the West Bank were 26.02 years and 22.66 years for males and females, respectively. In Gaza Strip, the singulate mean age at marriage were 23.91 years and 20.80 years for males and females, respectively. On the one hand, the singulate mean age at marriage in the Palestinian cities were 25.71 years and 21.68 years (for males and females), compared to 25.56 years and 22.73 years (for males and females) in the Palestinian villages, respectively. On the other hand, the singulate mean age at marriage for individuals awarded academic degrees higher than the General Secondary Certificate were 27.01 years for males and 22.56 for females. As for individuals who did not complete the elementary scholastic stage, the singulate mean age at marriage were 23.75 years and 22.97 years for males and females, respectively.

3.4 Degree of Consanguinity to Husband

The percentage of marriages among first - cousin relatives (cousins) in the Palestinian Territories was 28.7% for first marriage cases. In the West Bank and Gaza Strip, these percentages were 27.2% and 31.6%, respectively. The percentage of marriages among first - cousin relatives (cousins) in the villages and refugee camps were (29.4% and 30.5%, respectively) higher than in the cities (27.0%). The percentages of marriages among first - cousin relatives (cousins) for females holding academic qualification higher than the General Secondary Certificate and females who did not complete the elementary stage were 25.4 % and 31.1 %, respectively.

3.5 Polygamy

Examining data on polygamy indicates that the percentage of polygamic cases amounted to 3.5% in the Palestinian Territories. This percentage is higher in Gaza Strip (4.4%) than in the West Bank (3.0%). In cities and refugees camps, the percentages of polygamic cases were 3.0% and 4.2%, respectively. Further more, this percentage among the refugee was higher than among the non – refugee population, namely 4.0% and 3.1%, respectively. It is worthy to note that the percentage of polygamic cases among males completed more than the General Secondary Certificate was lower than those who did not complete the elementary scholastic stage, namely 1.6% and 6.2%, respectively.

3.6 Number of Marriages

The percentages of repeated marriage cases (two and more) for males and females were 10.5% and 3.9% of the total recorded marriage cases. In the West Bank, this percentage amounted to 9.3% (for males) and 3.4% for females, compared to 12.9% (for males) and 5.0% for females in Gaza Strip. In the refugee camps and villages, the percentages of repeated marriage cases (two and more) were 13.0% for males and 5.2% for females (in the refugee camps) and 9.6% for males and 3.2% for females (in the villages). Besides, the percentages of repeated marriage cases (two and more) among male refugees was 12.0%, compared to 9.4% among the non-refugee males. It is worth mentioning that the percentages of repeated marriage cases (two and more) among males completed more than the General Secondary Certificate was very much lower than among those who did not complete the elementary scholastic stage, namely 5.2 % and 19.2 %, respectively.

4. Methodology

4.1 The Questionnaire

The Demographic Survey questionnaire consists of seven parts: Control sheet, household roster, household mortality schedule, housing conditions schedule, relatives abroad schedule, women's schedule, and birth history.

The questionnaire was worded in colloquial Arabic. Questions were written in full on the questionnaire and strict instructions were given to interviewers to read all questions verbatim during the interviews.

4.2 The Sample and the Frame

The target population in this sample survey comprises all households living in West Bank and Gaza Strip, excluding institutional population and nomads.

The sample design adopted is a stratified three-stage design for selection of households to be surveyed. At the first stage a sample of *localities* to be the *Primary Sampling Units* (PSUs), was selected. The sample localities have been subdivided into *cells* of approximately equal size, and a number of cells were selected randomly from each of the sample localities at the second stage. At the third and final stage, a sample of *households* was selected from the sample cells. The stratification is a subdivision of the PSUs according to district, administrative status of the locality, and estimated population size. The PSUs were selected independently for each stratum, and with probability proportionate to estimated population size.

The planned sample size was 15,000 households. However, due to the sampling frame imperfections which were envisaged, oversampling was carried out at a rate of approximately 30%.

A detailed description of the sample design, response rates, variance calculation, and weighting is described in the Final Report.

4.3 Pilot Survey

A pilot survey was designed for testing the questionnaire, field work procedures and instructions, data entry template and instructions, and the estimated costs. The survey took place on February 1995 in the District of Jenin and Ramallah . A non representative sample of 160 housing units in rural, urban and camp areas were selected from these Districts for the pilot. The survey results were thoroughly evaluated and no major changes in the plan were required.

4.4 Field Operations

Data collection was carried out by 20 teams (16 in the West Bank and 6 in Gaza Strip) of female interviewers between April 29,1995 and July 23,1995. Each team consisted of 5 interviewers, a supervisor, a field editor, and a lister. Teams were distributed to the different Districts according to sample allocation, ranging between 1-3 teams in each District.

All field staff received a two-week training session combining general social science research interviewing with specialized training on the demographic survey instruments and procedures. Great attention was given to training in order to ensure that the survey is carried out under the same conditions throughout the country, providing consistency in definitions, understanding, and wording of the questions.

Field work procedures and organization were designed to ensure adequate supervision and the collection of high quality data. To this end, several quality control measures were used during fieldwork.

4.5 Data Processing

A data entry template was designed to reflect an exact image of the questionnaire, using EPI-INFO (Version 6.02) supported with NAFITHA-Version 4.00 (Arabization program). It included various electronic checks: logical check, range checks, consistency checks and cross-validation. Data entry was organized in a number of files, corresponding to the main parts of the questionnaire.

Final tabulation of results was performed using the well know statistical package SPSS for Windows (version 6.0).

5. Data Quality

The estimates reported here are subject to both sampling errors and nonsampling errors. Sampling errors are due to the sample design, and are, therefore, easily measurable. The estimated sampling errors for selected demographic variables at the national level are provided in the Final Report.

Nonsampling errors can occur at the various stages of survey implementation and are generally difficult to evaluate statistically. They include errors resulting from nonresponse, sample frame coverage, coding and classification, data processing, and response (both

respondent and interviewer related). Nonsampling errors occur in every survey and this one is no exception. The use of effective training and supervision and the careful design of questions as measures have direct bearing on the magnitude of bias resulting from nonsampling errors, and hence the quality of the resulting data.

The various checks performed on the survey data indicate the demographic data appear to be of very good quality.
